# To all Electron/BBC Owners

Tynesoft's January big name and value for money releases – watch out for our new titles on your machine every month in 1986.

## FOR THE BBC/ELECTRON

### IAN BOTHAM'S TEST MATCH

We think the best sports simulation yet on the BBC Electron and special features include:  
Four Bowling Options, Four Batting Options, One Player Mode, Limited Over game (16 overs), One Day game (32 overs), Test Match (Two full innings), Demonstration Mode

R.R.P. **£7.95**

### RIG ATTACK

One of our value for money tapes at a R.R.P. of £4.95. Rig Attack is an action packed game demanding skill and quick reflexes to guide your helicopter from ring to ring without coming under attack from enemy submarines. The submarine is equipped with the latest missiles, your copter carries short range bombs that need to be dropped at low altitude to reach that darling submarine in the waters below

R.R.P. **£4.95**

Other leading titles for the Electron in the near future:  
JET SET WILLY  
NINJA CHALLENGE

### WINTER OLYMPICS

Your opportunity to compete with the best in the world in the following Winter events: Down Hill, Ski-Jump, Cresta Run, Speed Skating, Slalom Skiing and Curling. Best of Luck in your challenge to become World Champion.

Release date 1st March, 1986

R.R.P. **£7.95**

### FORTHCOMING RELEASES:

JET SET WILLY  
NINJA CHALLENGE  
MOUSE TRAP

# TYNESOFT

COMPUTER SOFTWARE

If you require any of our software fill in the Order Form below.

All games are post and packing free or you can order by Access/Visa by ringing 091 414 4611.

You can also register on our Mail List by filling in the form below and sending it to:

## News

All that's new in the expanding Electron world.

5

## Grand Prix

Nimble fingers and fast reactions are needed to succeed in this exciting race game.

9

## MicroLink News

A monthly update on the potential of our online database.

12

## Software Survey

Follow the Stairway to Hell and enter the Diamond Mine. Alternatively you could get to Mexico '86 via the Maniac Mower.

13

## Oxo

High strategy meets low cunning in a logic game to strain your brain.

17

## Beginners

Trigonometric functions are easier to use than spell - if they're approached from the right angle.

20

## Dicer

An age old game comes up to date as your Electron learns to roll dem bones.

24

## ADFS

ADFS Sector Editor. Modify the contents of your discs with this powerful utility for Plus 3 owners.

28

## Notebook

Need a circle of triangles? It's all a matter of degree.

30

## Timepiece

An animated display of a fob watch shows the amazing potential of the Electron's graphics.

31

## Ready Reference

The second of our useful hint sheets. A guide to string handling functions.

36

## Hardware

Wigmore's Tarantula Touch Tablet put through its paces.

37

## Marching Order

Help with counting and ordering of numbers for pre-school children.

41

## Merlin's Cave

Philosophers Quest and Gremlins explored by our resident wizard. Plus more hints and tips for intrepid adventurers.

43

## Maths Workout

If you thought EOR is a donkey you're not being very logical.

45

## Find and Replace

FIND your way quickly through Basic listings and REPLACE the tedium of manual searching.

47

## Graphics

If you're in the mood for colourful mode changes our new series is for you.

51

## Micro Messages

The pages you write yourself. A selection from the many interesting letters you've been sending us over the last few weeks.

53

## Expand your Electron

Don't miss the biggest money-saving offer we've ever made. You'll find full details in the centre pages.

Lava, Gold Crosses, Fire Balls, An  
Audience with The DEVIL!

"STAIRWAY TO HELL"  
is available on

Cassette £12.95  
Disk £15.95

Our prices are inclusive  
of VAT and Post & Packing.

(Please note that disks are  
available by mail order only and  
when ordering, please state  
which OS you use and whether  
you require 40 or 80 track.)

## COMPETITION

£1,500 of computer equipment  
of your choice to be won!

1st Prize worth £750  
2nd Prize worth £500  
3rd Prize worth £250

Details in every "Stairway to Hell" pack!  
Competition ends 30th April 1986

# A GREAT NEW DOUBLE BILL

## CHIP BUSTER

The object of "Chip Buster" is to keep a  
computer circuit board in working  
order by running about the tracks  
repairing damage caused by  
"bugs" which "byte" large holes  
in the board.

- 3 Different circuit boards.
- Various bugs including Spiders,  
Ladybirds, Ants, Woodlice.
- Super Smooth 4 way scrolling.  
(BBC Only).
- Joystick Option. (BBC only).
- Great sound with music.
- Damage report, Circuit Board Explosion.
- High Score, Freeze Game.
- Invisible Tracks on Higher Levels.
- Countdown Timer.
- 100% Machine Code.

Cassette £7.95  
Disk £10.95

# electron NEWS

## Repton 2 collects award

**STRATEGIC** treasure hunt - cum - jigsaw puzzle **Repton 2** from Superior Software - which is available for both the Electron and the BBC Micro - has won the title 1985 BBC Game of the Year.

The award was decided by a poll of readers of *Computer Gamer* magazine and presented at a ceremony held at the Regents Palace Hotel, London.

**Repton 2**, which features in a special subscription offer in this month's issue of *Electron User*, beat **Revs** from Acorn-soft into second place in a close-run race.

Third was **Knight Lore** from Ultimate.

## Disc book

A FREE 70-page handbook describing its disc drive operating system for the Electron has been published by Cumana.

The publication covers detailed technical information, all operating procedures and functions, from data storage through to fitting an additional ROM.

Electron owners can obtain a copy by writing to Cumana Limited, Pines Trading Estate, Broad Street, Guildford, Surrey GU3 3BH.

# Interface opens up software range for Electron

A **DRAMATIC** breakthrough on the Electron front has opened up the machine to "a vast pool" of disc based software currently restricted to the BBC Micro range.

In all several hundred titles are involved, including many of the leading educational programs available in the UK.

All this is due to Advanced Computer Products going into production with an Electron disc interface. Known as the AP4, it will feature 1770DFS as standard running with page at E00.

Priced in the region of £70 - the price has still to be settled - the interface will allow the transfer of files between systems. This includes not only tape to disc but

DFS to ADFS and vice versa.

"One of the main complaints from Electron users has always been the lack of good software around", says John Huddleston of ACP. "Now the AP4 will change all that".

Advanced Computer Products also hopes to launch another major enhancement for the Electron on the heels of the AP4.

To be called the AP5 this combines a 1 MHz bus, user port providing the same I/O as the BBC Micro and a Tube interface.

The Tube will allow

Acorn's second processor to be connected to the Electron, so providing a major boost in speed. It will also create additional memory - some 40k in Basic usable RAM and more than 60k machine code.

Meanwhile ACP has added another new product to its range to supplement the Advanced Disc Toolkit.

The Advanced ROM Manager gives user ability to handle ROMs in ROM filing system.

Priced at £20, it allows users to run their own software from sideways ROM

## BATTLE OVER MEXICO

**SOFTWARE** publisher Malcolm Howard is fighting off an attempt to suppress his World Cup football management simulation for the Electron, Mexico '86.

Leading games manufacturer US Gold feels it has sole rights to the title due to a licensing deal with FIFA, the world football ruling body and organisers of the World Cup finals.

Solicitors for US Gold recently wrote to Howard's company, Qual-Soft, stating their objection to the mail order firm's use of the title.

But Qual-Soft has been marketing its Mexico '86 game for nine months, and Howard says he sees no reason to give up the title.

"The official FIFA logo with the words Mexico '86 has been registered but never published, so it is not in force according to our legal advisors", Howard told *Electron User*.

## The mouse is coming!

**THE** new AP5 interface (see main story) will allow Electron users for the first time to enjoy the advantages of the critically acclaimed AMX Mouse.

Such was the success of the original mouse for the BBC Micro that it sold 10,000 units in the first nine months alone.

Now the opto mechanical device from Advanced Memory Systems will offer Electron users what its manufacturers describe

as "an entirely new approach to computing that makes the keyboard seem almost old fashioned".

The AP5 will also allow the Electron to run AMX Art. This is a computer-aided drawing program utilising on-screen windows, icons, pull-down menus and pointers for producing professional standard drawings or mere doodles that can be saved and printed.

**RATED 8 OUT OF 10  
FOR QUALITY,  
GRAPHICS,  
PLAYABILITY & VALUE!**

EL-3

# Electron takes over parish paperwork

**MINISTERING** unaided to a parish of about 15,000 people near Mansfield, Nottinghamshire, makes every day a busy one for the Rev Robin Walford.

But he has been able to cut the job down to manageable size since he bought an Electron 18 months ago.

Like his colleague down the road in Nottingham, the Rev Leslie Cowley, whose story was carried in last month's *Electron User*, he finds a computer takes a lot of the strain out of parish paperwork.

Priest-in-charge of St Alban the Martyr in the mining community of Forest Town, Mr Walford's conversion to serious computing with the Electron has been a gradual process.

He said: "I discovered the Electron shortly after I arrived in

the parish and bought it with the intention of playing games and with some vague ideas of using it for administration.

"The games quickly palled, but my Electron didn't, and I have gradually developed my usage as well as the equipment over the time.

"In order to cope single handed with my workload I'm required to be very efficient in my administration and ministry, and my Electron plays a big part in this.

"My use of the machine falls into two main areas, word processing and database.

"My use of View is continually growing and what a blessing it is.

"All my correspondence is produced this way and I store on disc all of the standard forms for baptism and marriage, banns certificates,

*Rev Robin's Electron takes the strain*

deeds of covenant, and application for permission to videotape wedding services.

"I use macro letters to write to, say, all the users of the church hall about some matter, in conjunction with the database to write to bereaved relatives on the anniversary of the death of their loved one, and to send encouraging notes to church members who have fallen by the wayside.

"I also store and reproduce various hand-

outs which I use for courses I run and produce the various rotas for church duties.

"On my database I keep the church electoral roll, bereavement contacts, baptism contacts and names and addresses of those who covenant to our church.

"I have not yet got round to using Viewsheets, but have in mind its application in budgeting, balance sheets and covenants.

"My use of the Electron continually grows".

## Aussies like our cricket

**RETURNING** to its originators like a boomerang is Australian best seller Arnie's Armchair Cricket.

North East software house Tynesoft bought the rights to convert the game for the Electron and retitled it Ian Botham's Test Match.

But the Australians - who did not have their own Electron version - liked the conversion so much they bought the rights to sell it back Down Under.

Tynesoft's version of the cricket simulation game is now on sale in the UK, price £9.95. It is one of its three new releases.

The game has a choice of one or two players and selected number of overs; one day or test match. The user also has a choice of players, their strengths, positions and speed of play or can ask the computer to preselect them.

An Electron conversion of the classic arcade games Jet Set Willy and Rig Attack, are the company's other two releases. They cost £7.95 and £5.95 respectively.

## More from Ribbon

**BUDGET** software specialist Blue Ribbon has added two new programs for the Electron to its range.

The first, Astro Plumber, has the user flying around the screen trying to seal leaks before either the air supply runs out or he is captured by cavern dwellers.

In the second - Diamond Mine II - the user is sent scurrying underground to collect as many of the precious stones as possible.

Both games cost £2.50 on cassette.

## LEARNING MATHS THE HAPPY WAY

**HAVING** fun and learning maths aren't incompatible activities any more thanks to a suite of programs produced by ISMEC - the Independent Schools Microelectronics Program - for the Electron.

Number Games is aimed at primary school pupils and consists of six programs which explain and teach basic maths by providing simple and enjoyable games for children to play.

Boxes, Number Knight, Ladder, Little Blokes, Nimble Knight and Light Up are designed to please the eye and stimulate the youngsters' minds.

For example, in Little Blokes the user is introduced to adding by

moving a figure around a grid system, a process that involves calculating a series of moves.

Price of the cassette, which is transferable to disc and Econet compatible, is £9.95.

## One for snooker fans

**THE** game Electron-owning snooker fans have been waiting for has been released by software house CDS.

Steve Davis Snooker comes with computer play options giving demonstration games and has two particularly novel features.

It is the only snooker game which gives the user the option of making a player who

produces a foul shot resulting in a snooker go again.

And clearly visible on the screen is the score in the current break and the colour selected by the player at table, allowing the game to be left for a period and resumed when convenient.

There are a number of skill levels, three table speeds, and a large

range of power settings make for precise cue control.

You can choose from one player, two players and even no player games. If you ask Steve to play you get a demonstration game which allows you to study his technique and improve your play.

Steve Davis Snooker costs £8.95 on cassette and £12.95 on disc.

**Now you can link your Electron to the telephone, here's how to make the most of your new hobby!**

No. 1

**Special supplement:**  
Guide to Microcomputing on Prestel. Contains hundreds of page numbers covering games, education and business and utility programs for the BBC, Apple, Commodore and Spectrum. Plus hints, tips and reviews of comms products.

No. 2

**Special supplement:**  
Guide to Communicating with your Micro. All you want to know about user-to-user communications, protocols, how modems work, an introduction to networking and PSS. Plus a guide to 39 modems listing all their special features.

No. 3

**Special supplement:**  
Guide to Bulletin Boards in the UK. An in-depth survey of what bulletin boards offer and what they cost, how to access them, interviews with 12 leading sysops. Plus a complete listing of 39 bulletin boards, pinpointed on a map of the UK.

No. 4

**Includes the first Teletext & Videotext News, highlighting all the latest industrial news. Plus features on financial, legal and educational databases, start of a guide to Knowledge Index, how to work out your phone bill and a survey on portable micros with comms facilities.**

No. 5

**Special supplement:**  
Guide to Communications Software. A survey of 37 communications software packages for 11 of the most popular micros. Plus advice on videotext graphics, description of the de facto standard for UK bulletin boards, Xmodem, and online humour from Punch editor Alan Coren.

No. 6

**Special supplement:**  
Guide to teletext page design. A leading expert tells how to achieve eye-catching viewdata graphics. Plus all about coin-operated Prestel, setting up educational viewdata systems, using packet radio to cut phone bills, on-line credit reporting.

No. 7

**Special supplement:**  
Guide to using electronic mail. A detailed expert introduction to electronic mail's time-saving and cost-cutting features. Plus a challenge to Prestel's monopoly, launch of the BBC's Datacast, interview with a top US hacker, and how FarmLink is branching out.

# Grand Prix

By  
**STEPHEN  
MERRIGAN**

ZIP up your fireproof suit, don your crash helmet and slide into the cockpit of your grand prix racing car. Strap yourself in and prepare for the big race.

It may be a Grand Prix but at times it'll seem more like the dodgems as you battle your way to the front of the pack. Once you're in front, hang on.

If you're first across the line at the finish you move up into the next race class.

There the skill of the competitors increases to match your own so there's always a challenge. You won't find these drivers so easy to beat.

The keys are < to turn anticlockwise and > to turn clockwise. There isn't an accelerator or brake - it's an automatic, you go flat out all the time.

## VARIABLES

**B%()** Stores the track.  
**A%()** Cars' directions.  
**Q%,W%** Your car's coordinates.  
**q%,w%** The other cars' coordinates.  
**a%,s%**  
**d%,f%**

## PROCEDURES

**var** Sets the variables, defines the characters and envelopes.  
**draw** Draws the track.  
**car1**  
**car2** Moves the other cars.  
**car3**  
**raceover** Ends the race and moves you up to the next class if you've won.  
**ins** Prints the instructions.  
**move\_man** Moves your car.

EPIC ADVENTURES...EPIC ADVENTURES...EPIC ADVENTURES...EPIC ADVENTURES...EPIC ADVENTURES...

# EPIC No true adventurer should be without them

Electron User October 1985.

## ADVENTURES The Wheel of Fortune

All Epic Adventures contain the following features:

- Written in machine code to give fast response
- At least 220 fully described locations
- Commands can be entered as full sentences
- Fast game-save on tape
- Large vocabulary
- Lots of objects, treasures and puzzles to solve

The Wheel of Fortune has many additional features including an advanced command interpreter which accepts multi-statement sentences and also allows you to talk to the intelligent characters in the game.

VOTED THE TOP ADVENTURE BY ELECTRON USER READERS

You are transported to a fantasy world of magic and mystery. As you wander this mystical land you encounter some strange people. They may help you to find valuable treasures but don't upset them or you may not live to find the Wheel of Fortune and return to civilisation.

**THE QUEST FOR THE HOLY GRAIL:** To become a Knight of the Round Table, you must find the Holy Grail and return it to Camelot. Sounds simple, but you will have to face the deadly Black Knight, behind the mystical maiden, summon the mystical monk and solve a host of other problems to complete your quest.

**CASTLE FRANKENSTEIN:** The Frankenstein monster is terrorising the villagers. You have been elected to seek out and destroy him, but where do you start? Perhaps the graveyard holds some clues, or the deserted shack? Once you enter Frankenstein's castle, your adventure has only just begun...

**THE KINGDOM OF KLEIN:** The Wicked Witch of the Mountain has stolen the magic Klein Bottle from the palace. She has sworn to put a hideous curse on whoever tries to recover it. Can you discover the mystical properties of the Bottle and destroy the witch? Can you then escape from her domain alive?

## WORD WINGS DOWN FROM WICK

CAITHNESS Glass, the company that made the Mastermind presentation bowl and many other famous engraved glass trophies, is using MicroLink for a pilot project which may eventually lead to a network linking it with its UK sales reps, agents and concession shops.

Famous all over the world for its collectors' paperweights and glass-and-silver jewellery, the firm has a greater need than most for reliable, high speed communications.

Situated in Wick, just about as far north as you can get in mainland Scotland, the company has factories in Perth and Oban, its sales office in Stoke-on-Trent, and reps, agents and retail outlets all over the UK.

"Considering the shortcomings of the postal system it would be ideal for everyone to have their own mailbox on a closed MicroLink network to facilitate ordering, financial accounting and stock control", said accounts and systems manager Homer Lindsay.

"It might even be possible to open up a section for micro owners among the 11,000 people around the world who are registered collectors of our paperweights so they can go on-line for the latest news about our products".

## The password is...

WHEN someone joins MicroLink they are issued with their personal mailbox number and a unique password.

This is usually a six letter word - six is the minimum number of letters the system will accept - and the subscriber is, of course, free to change the password as often as required.

Human nature being what it is, do subscribers often lose or forget their passwords?

Says system manager Colin Rogerson: "Not very often now that MicroLink is well established. But in the early days we averaged one such

case a week.

"However the problem is easily overcome. After taking the most stringent steps to establish the subscriber's credentials we refer them to the original password they were allocated, which is kept on permanent file at MicroLink's head office, and reissue it to their mailbox.

"But it does point up the fact that subscribers should always be careful to keep a record of whatever password they are using at the moment - although not in too obvious a place - just in case they suffer a lapse of memory".

## Log on to the Flying Pig

LONDON subscriber Adrian Mars is using MicroLink to operate what he claims is the world's cheapest, completely independent, professional computer consultancy service ever.

He's even calling his organisation Flying Pig Services as an indication that he believes just about anything is possible with the help of MicroLink.

Flying Pig will help both home and business micro users choose their hardware, peripherals and software and also solve technical problems.

For £5.40 clients receive via MicroLink one or more versions of a comprehensive questionnaire relating to their specific area of interest.

The completed form will be assessed by Flying Pig consultants who, says Mars, will promptly offer "an unbiased reply that could well save lots of money". The client is also entitled to 15 minutes consultancy over the phone.

## Hold that train...

THE train now standing at Platform 4 can be caught courtesy of MicroLink, making subscribers rail journeys simple to organise from home or office.

If they hold a Visa, Access, American Express or Travel Key credit card they can book British Rail tickets, seat and sleeper reservations using MicroLink's new telebooking service.

Seats can be reserved at an extra cost of £1 - or £2 on Pullman services - and the charge for sleeper accommodation is £15 a berth.

MicroLink even helps subscribers choose their trains by carrying constantly updated British Rail timetables, together with fares between London and 20 major cities throughout England, Scotland and Wales.

## LINK OVERCOMES HANDICAPS

MICROLINK has been chosen as the electronic medium for an innovative scheme to introduce disabled people to the world of telecomputing.

Over the next few months the Central Remedial Clinic in Dublin will operate a pilot project involving half a dozen or so people of normal intelligence but who have physical handicaps ranging from slight motor impairment to the inability to move or speak coherently.

The project is thought to be unique in that, as well as using MicroLink's electronic mail facility, it will also embrace speech synthesis and speech recognition technology in helping the disabled to communicate with the outside world.

Microelectronic resources manager Bob Allen said: "We hope that their increased ability to communicate will lead to fuller lives. I won't guarantee them a job, but at least it will give them a fighting chance in the marketplace".

Interestingly, the disabled people involved in the project aren't thrilled at the prospect of telecomputing from home.

"At first we took the traditional view that this would mean independence for them", said Allen, "but they told us it would remove the social dimension from their lives and tend to isolate them.

"So we have compromised and will arrange for them to attend centres where there is a human element combined with the working environment".

# Software Surgery

THE COLUMN THAT TAKES A LOOK INSIDE THE LATEST RELEASES

## Kissin' Kousins English Software Co.

THIS is a good old fashioned arcade game containing the two vital ingredients for success — it's addictive and it's fun.

The aim of the game seems to be to navigate the male cousin past all manner of hazards until he meets his female counterpart.

It all looks very simple. You move the little chap straight across the screen on a road, jumping him over the odd bush and post box.

The quality of the background graphics is so good that you may find your mind wandering from the task in hand.

Another problem is the severe shortage of time. You lose a life if you don't cross the

## Having fun with the relatives

screen quickly enough. Not only that, you are being bombed as well.

It won't be long before you manage screen 1 with confidence and can then tackle the moving caterpillars on screen 2. Success here leads you on to the bouncing kangaroos, and by shooting these defenceless beasts you can obtain bonus points.

By now the road has led to the wooded countryside, and you encounter bats and moving mushrooms. These are pretty taxing, and avoiding them requires a lot of practice.

Screen 6 brings you to

some rather cute frogs, but also to a long, dissolving bridge. This one defeats me, so I don't know what happens next.

I have two criticisms. Firstly, a multi-screen game like this should give you the option of starting with any screen.

Secondly, the game lacks a high score table, merely keeping a record of the highest score.

Those points apart though, this is an entertaining family game. The graphics and the animation are of a superb standard and the sound is

adequate.

An extra bonus is that the tape contains both BBC and Electron versions of the game. (Make sure you load the right one.)

Recommended for arcade addicts of all ages.

Rog Frost

## Helpful Mr Men

### Word Games with the Mr Men Mirrorsoft

THIS follows in the same promising steps as the earlier Mr Men programs from Mirrorsoft. Now the number of little characters is reduced to four, but the graphics execution is greatly improved.

Mr Noisy's Word Game features Mr Funny and Mr Silly as well as Mr Noisy, and the intention of the series of activities is to practise opposites and comparatives.

Any of the nine activities can be selected from the menu, and these include options in which the child can conjure up on the screen any of the characters in any given dimensions, so a tall Mr Noisy can stand beside a wide Mr Silly.

The young children I tried this with obviously enjoyed these activities, yet a great amount of vocabulary was

being used, orally and in reading and typing at the keyboard. There is a screen dump facility included.

My favourite program, and that of many of my fellow players, was Read with Mr Bounce.

Again there is a menu with just five choices and this time the intention is to encourage practice in reading through the repetition of a number of phrases.

All in all, a fine program with a very real educational purpose, yet an equally high enjoyment factor. I highly recommend it.

Phil Taylor

## The first steps

### Make Sam Smile Garland Educational Software

THREE separate packages, Counting, Word Matching and Spelling are designed to help with the first steps in learning to read and count.

Each is divided into three or four sections with activities relating to the growing skills of the children using them. All have superb graphics and a most appealing format.

Number recognition, learning to count and an introduction to simple addition are all included in the activities of the first package, Counting.

As with the others in the series this program features Sam, a friendly little chap who's very sad, but easily pleased by getting the right answers to his questions.

There are four games in the counting program. The first two require you to match numerals with a number of

objects. In Game 1 a random number of croaking frogs, wriggling worms, skipping girls or barking dogs is displayed. I've discovered 18 different shapes so far.

The numeral cycles through from 1 to 10, if the number matches then Return should be pressed, if not, the Spacebar should be used.

Game 2 is similar except the numeral stays constant but the number of objects cycles through from 1 to 10.

Games 3 and 4 display two sets of different objects, and

## From Page 13

the total number has to be matched with the numeral. This activity is a simple introduction to the concept of counting.

It is most important that these programs are carefully introduced to a child by an adult. The various aspects of each game are not really apparent from the screen display and the child needs to be shown what to do.

Changing from one activity to another is achieved by pressing a function key but there is no prompt on the screen to tell you when to do that.

I turned to the Word Matching program next. It has been designed to encourage the child who's just beginning to read. Objects are displayed on the screen and they have to be matched with the correct word. Again, this program only requires the use of the Spacebar to reject a word, and Return to indicate the correct answer.

The character Sam enters the screen and draws an empty box and a familiar object with the word for the object above it.

In Game 1 words are placed randomly in the box until the correct match is obtained – the

child is matching word to word.

Game 2 requires the child to remember an object word that is flashed on to the screen and match it correctly as the words are shown in turn.

Game 3 is the same but no dots are displayed after the object word leaves the screen. In all three, incorrect responses cause successive letters of the answer to appear.

The vocabulary is restricted but although the number of words is limited the quality of graphics is very high.

An interesting feature is a caterpillar that crawls along the bottom of the screen. Each correct response causes it to crawl a little further until it reaches a leaf, then a butterfly emerges and flutters back across the screen. That piece of graphics is a real credit to the program.

Finally I tried out the Spelling package. This could not be introduced to a child until the rudiments of word recognition have been mastered. The vocabulary is a subset of the Word Matching program and so forms a good follow up exercise.

However, spelling is a far higher level activity than the word matching exercises and care should be taken that the child is ready for this type of work.

**John Woollard**

# It's a long slog to Hell

## Stairway To Hell Software Invasion

BY far the biggest game I've yet seen for the Electron, Stairway To Hell is basically a graphics action game. But it has been produced on such a scale that it takes on the aura of an adventure program.

It is actually four linked programs – the first three consist of four separate screens each, and the last of these three, making a total of 15 screens, each of which is nearly a game in itself.

The object is to guide your explorer on his journey to the centre of the Earth through the various hazards to the last screen – an audience with the Devil.

I haven't seen this final screen yet, but the preceding 14 constitute a bewildering variety of detailed graphics and excellent animation.

Each is a variation on a familiar theme – climbing over obstacles, up and down ladders, jumping holes or moving hazards and collecting objects

for points.

Variation is the key word here, and I can't think of a possibility which has not been covered in some way in one or another of the locations.

Moving is by the usual keys (Z, X, \* and ?) and Return for a jump. Each section of the game has some short instructions, informing you of the environments, how to score points and bonus marks, and what to look out for.

Part 1 takes you down into the subterranean world through mines, the pump room and the grotto, each with its own brand of hazard such as rock falls, trolleys and rats.

From here you move into the realms of ice and snow, which gradually thaws to become a sub-tropical forest with mutant plants.

The temperature rises still further in part three, where snakes abound in the jungle, crocodiles in the swamp, and mosquitos in the mangroves.

Should you survive the desert and the entrance to Hell, fire and brimstone are everywhere as your explorer avoids falling lava and jumps flaming pits.

I'd really love to know what the audience with the Devil is like! The instructions do have the strange observation "Is this your journey's end?", so perhaps Software Invasion are keeping something up their sleeves.

My favourite screen is the Grotto, featuring invisible tunnels which you can only enter when approaching from the correct direction. Walking happily along you suddenly find yourself on a different level!

Along the way the very skillful will have accumulated enough points and information to enable them to solve the final screen, and in doing so stand a chance of winning one of the prizes being offered – the first worth £750.

Sound, however, is only adequate but to be fair this is not surprising when you consider how much has been packed in.

Stairway To Hell has all the

# Strategy on the lawn

IF you fancy a peaceful job like mowing a lawn, then this program is designed to put you off. Mind you, the rewards are quite high, with more than £1,000 – in points – to be earned by the keen and careful operator.

Your garden is, presumably, right next to Taunton Cricket Ground with Ian Botham in full flow. Quite an amazing number of cricket balls join the elastic bands and other debris lying about.

Any contact with these harmless looking bits and pieces means a new mower is required and you've only got three. A further problem is that your mower gets ruined if you venture on to grass that's already cut!

The biggest danger to life and limb is the rival mower,

## Maniac Mower Kansas

This little beast is hell-bent on colliding with you, or on making you bump into the garden walls or one of the nasty objects. You can do the same and try to trap the maniac mower for additional points.

To complete the misery a karate expert is practising in the garden and he is very keen to give you the chop.

This game ought to be fun to play but it is too slow for real arcade action. There is a lot of strategy involved in keeping your mower going and trapping your rival, and the game is enjoyable at that level. But one bad feature is that the chosen

colours are awful, producing moving diagonal lines on black and white or colour TVs. Needless to say, all is well if you have a monitor.

As seems to be usual with Kansas games the instructions are excellent and a model for other software houses to copy. A feature of the program which I like is that it is written in Basic and listable, which means you can modify it to your heart's content. I'd also recommend the game to BBC Micro owners where the speed of action is good.

Arcade addicts will unfortunately find this game a disappointment, but if you prefer a slow action strategy problem and enjoy tinkering with programs then why not consider Maniac Mower?

**Rog Frost**

hallmarks of a very classy production. If you enjoy this sort of game, you'll love this one, and like all good adventures it will take a lot of time and perseverance to complete.

One final point. This cassette is one of an increasing number with the Electron version on one side and the BBC Micro version on the other. The result is that many shops are now stocking Electron games where previously they only carried those for the BBC Micro. Manufacturers save on production costs as one tape is cheaper to produce than two, and of course more Electron programs in the shops means more tapes sold.

This has to be good for the industry in general and Electron users in particular, and I would like to see this practice adopted by all software houses whenever it is practical.

**Nick Rhodes**

**Not much  
down the  
mine**

**Diamond Mine**  
Blue Ribbon Software

AT just £2.50, this program is aimed quite definitely at the "pocket money" market.

However the low cost is well matched by a low interest level, little originality and little in the way of addiction.

It's not that the program is particularly bad, but just that I cannot really find very much to get enthusiastic about.

Imagine a mine - which is

essentially a vertical maze - and at the top is the beginning of a pipeline.

You must guide the pipeline down through the mine in search of diamonds. There are a number of rather cute bugs which have a disconcerting habit of eating the pipeline, and these must obviously be avoided using the usual Z,X,\* combination of keys.

The walls of the mine must also be negotiated, or else a length of pipeline is lost.

Having said that, there is remarkably little to add. It is not a particularly easy game to play, although naturally success comes with practice.

Sadly, I found that boredom also set in, although the game might keep some younger players interested for a few hours.

The Electron has been around a long time now, and the level of much other software makes this particular program look rather poor in comparison.

**Pat Hillery**

**Packin'  
a lot in**

**Mexico '86**  
Qualsoft

HAVING played a variety of football management simulations, I eagerly loaded the first of these twin cassettes, which deals with the qualifying stages.

Actually it also includes a couple of European friendlies and the South American tour, which give ample opportunity to review your strengths and weaknesses. It also gave me the ideal opportunity to do the same to Qualsoft's program.

In some respects I was a little disappointed, for I began at the easiest skill level where the results seemed just too random and often incredible.

The sound effects are not particularly exciting, but these can be turned off. The most disappointing aspect was when I actually managed to reach the final where England beat Italy, but there wasn't a cup in sight - merely a one word message of congratulations!

The graphics, however, do give the impression of a

football match, with 22 little men rushing up and down the pitch with great effort, although poor skill. This is, naturally, computer-controlled so you can just watch the action for a minute or so.

At the higher skill levels the whole idea becomes far more interesting, with the players' strengths and weaknesses taken into far greater account. Great skill is needed, as I found it very easy to lose many a critical game.

However when the England team does eventually qualify it is necessary to save the data on to a blank cassette, which can then be reloaded into the second part, that dealing with the finals in Mexico.

Once there a squad of 20 is

selected from the players so far used. Yes, there is an option to add extra players, so you too can play for your country! The stages here are really very authentic, but when you've won the cup once I would strongly suggest that you try at a more competitive level in order to capture the real challenge the program offers.

Sadly, although the qualifying cassette can obviously be reused there is no save facility elsewhere, and the whole program is a bit monotonous at one sitting. Still, it is a credit to Qualsoft to see just how complex an idea can be programmed into the Electron.

**Phil Taylor**

## All singing, all dancing science

THIS package in the Secondary Science series breaks new ground by being in the format of "computer synchronised audio".

This means that a tape commentary - spoken by Fred Harris - is played while the software runs. The two are kept in step by the simple method of pressing a key when Fred tells you to.

The programs are disc based only. In fact the drive is kept very busy throughout the presentation which lasts about half an hour. During that time, you will be stunned by the beautiful graphics that your computer can produce, seemingly instantly.

The package aims to teach or reinforce the chemist's rather specialised concept of a mole. To him it is a unit of measurement, not a furry animal. This is achieved by tutorial sessions followed by questions.

When used with pupils aged 15 and 16 there seems to be a good balance between teaching and questioning and the novel presentation of the information encourages them to solve the problems.

If any pupil finds questions difficult then a worked answer is given on screen.

The topic is covered thoroughly during the presen-

**The Mole Concept**  
BBC Soft

tation, with domestic and industrial applications brought in.

In fact, long after Fred Harris has finished talking you can still be carrying out titration simulations and working out the molarity of solutions.

The accompanying booklet implies that this software should be used by individual students. Many schools would not be able to afford the computer time for this, but in fact the software works well with groups of pupils.

However it is used, there can be little doubt that students on O level or CSE chemistry courses will benefit from this software.

These pupils enjoy the novel format, the interesting voice and a touch of humour, not to mention the really lovely graphics. The learning they achieve is almost a side issue, but in fact a lot of knowledge sinks in.

This is a program that chemistry teachers really should find time for. It is a positive aid for pupils in coming to terms with this difficult idea.

**Rog Frost**

**WORN OUT** with  
wordprocessing?  
**DEPRESSED** with  
databases?  
**OPPRESSED** with  
machine code?

**Then you need...**

(It's the perfect antidote to  
microcomputer malaise!)

#### Volume 1 contains:

##### **Jam Butty**

Machine code simulation of high drama on a building site

##### **Golf**

Play a round by yourself, or play against your pals.

##### **Haunted House**

Fight against all the odds to get out alive.

##### **Space Hike**

Another classic. Help the spacemen avoid marauding monsters.

##### **Parky's Peril**

Help Parky through an invisible maze, racing against time.

##### **Rally Driver**

All the thrills of high-speed driving, with none of the risks.

##### **Alphaswap**

Your letters are in a twist. Can you put them in order?

##### **Knockout**

Fast and furious action as you batter down a brick wall.

##### **Money Maze**

Avoid ghosts and collect coins in an all-action arcade classic.

##### **Lunar Lander**

The traditional computer game specially written for the Electron.

#### Volume 2 contains:

##### **Atom Smash**

Machine code thrills as you help to save the world from destruction.

##### **Bunny Blitz**

Go egg collecting, but keep away from the proliferating rabbits.

##### **Castles of Sand**

Build castles - but beware the rising tide and hungry sandworms.

##### **Reaction Timer**

Test your reactions with this traffic lights simulation.

##### **Solitaire**

The Electron version of the age-old game of logic and patience.

##### **Jumpier**

Jump for your life in this exciting arcade action game.

##### **Break free**

Test your wits and reflexes in this popular classic ball game.

##### **Code Breaker**

Crack the code in a colourful (if frustrating) brain teaser.

##### **Parachute**

Save the plunging sky divers from a watery end.

##### **Star Fighter**

Attack the bandit ships in this fast-moving 3D punch-up.

**ONLY  
£5.95  
each**

8					X	X					
9					X	X					

2. MARY goes now

OXO is a game of strategy between two players. Each opponent takes it in turn to place either an X or an O on the 10 by 10 grid.

The object is to make as many combinations of the word OXO as possible.

The game ends when all the places are filled or when a

player resigns.

The motivation I had for writing this program came from my class at school. All credit for the ideas, layout of

the screen, design of the grid and colour combination must go to the pupils of 3R2 at Broom Field School.

The program can be loaded and run on an ordinary Electron.

However if it is to be used with a disc drive the value of PAGE must be lowered to &E00.

The program requires a lot of memory to store all the grid values and to accommodate the high resolution graphics mode. The ADFS reduces the micro's memory.

When you run the program the first prompt to be displayed is Sound? Tapping Y within 10 seconds will give full sound cues throughout the game.

The names of the two players are then entered. Only 11 characters are allowed for each name.

The prompt Auto start? then appears. If Y is pressed the Electron will randomly place up to 20 crosses on the grid at the start of the game.

We have found that this speeds up the start and makes it more interesting. It does not give the first player any

advantage or disadvantage, but it does mean that a mistake in the early part of the game may be fatal.

The computer selects which player goes first and his or her name is displayed at the bottom of the screen.

A character is placed on the grid by typing the coordinate of the required position as a letter followed by a number.

The character X or O is then pressed. Delete can be used at any time if you make a mistake.

When you're sure that the entry is correct press Return.

The game continues until, after 100 moves, the grid is full. The winner is then declared.

It is possible to resign by pressing the Escape key.

This game has been written to a structured format to help with debugging and to allow changes to be made more easily.

Lines 10 to 490 contain the main sequence of events.

From this section of the listing all the procedures and functions are called. These are contained in lines 500 onward.

By JOHN WOOLLARD

### PROCEDURES

- autoplay** Puts randomly selected Xs on the grid at the start of autoplay.
- cube** Draws a cube.
- display** Draws grid, cube and scorepad.
- endmessage** States the winner.
- gamesetup** Clears grid before the start of play.
- get(low%,high%)** Waits until a key is pressed in the range defined by the parameters. VDU7 if out-of-range key is pressed.
- initiate** Dimension variables for such things as the grid, sets up double height routine, reads data.
- input** A double height utility input.
- oxo1, oxo2** Analyses grid for a winning combination of O-X-O.
- play** Displays the prompt and receives player's move.
- print(x%,y%,a\$)** Prints a\$ out at TAB(x%,y%) in double height.
- printsetup** Contains the machine code assembly for the double height print routine.
- score** Uses FNOxo1 and FNOxo2 to calculate score.
- tune** Plays a five note sequence.

QUAL-SOFT

## THOUGHTWARE

Sports simulations

"A real challenge to the thinking football fan... Bobby Robson could do worse than have a crack at this in his preparation for the World Cup".

AMSTRAD ACTION  
REVIEW Jan '86

QUAL-SOFT COMMENT: At last an INTELLIGENT management game for the knowledgeable soccer enthusiast!

TAPE 1  
QUALIFIERS

## MEXICO '86\*

TAPE 2  
FINALS

## A WORLD CUP MANAGEMENT SIMULATION

Summer 1984 and English international football is at its lowest ebb. We have failed to qualify for the European Nations Cup, and had a string of very poor international results. In a few months we will set out on the '86 World Cup qualifying trail. You have been given the most important job of restoring English pride in their football. You have a match in Paris, the USSR at Wembley, and a South American tour, to assemble a team, first to qualify, and then to beat the world's best in Mexico.

## TAPE 1 (Qualifiers)

- \* Current squad of 16 players + 20 user defined players.
- \* Friendlies in Paris, at Wembley + South American tour.
- \* ANY team formation you choose. 2 from 5 substitutes.
- \* In match tactics: any no. of individual player adjustments.
- \* Your qualification group: full results and table.

## TAPE 2 (Finals)

- \* Choose a 20 man squad to take to the finals.
- \* Group of 4 prelims, 16 to final knockout comp.
- \* Extra Time, PENALTY SHOOT-OUTS, where relevant.
- \* Formation and strength information on opposition.
- \* 2 from 9 substitutes (the FA tells us so).

## ENGLAND'S GAMES: FULL PITCH, 22 MAN, 3D GRAPHICS &amp; SOUND EFFECTS

QUAL-SOFT comments: With 5 levels of play, 12 depths of sophistication, and "fun" graphics, this game can be enjoyed by an 8 year old youngster as a "fun" game, and by the most sophisticated as a tactical/strategy challenge of the highest order.

**PACKAGE:** Tape 1 plus Tape 2 plus 20 Page Manual in "Video Cassette" style pack. Only £9.95 (57K RAM usage. Some would call this a MEGAGAME. YES IT WILL RUN ON YOUR 32k ELECTRON.

**QUALSOFT GUARANTEE:** Sent by 1ST CLASS POST on day of the order with P.O., Cheque, Access payment is received. Telephone Access orders accepted.

```

**LAST** month we took a look at some of the Basic functions available on the Electron.

First we touched briefly on the string handling functions we already knew and loved, examples being ASC and CHR\$.

Then we went on to cover some of the functions used to handle numbers such as INT and SQR.

Finally we saw how COUNT, POS and VPOS could be used in screen layouts.

This month we'll be looking at some more — the trigonometric functions such as SIN and COS that you may remember from school. We'll also be meeting a resident integer variable, @%.

But first we'll take a look at a constant, a number that never changes. Try entering:

**PRINT PI**

into your micro and pressing Return. Quick as a flash the Electron will hurl:

**3.14159265**

back at you.

Now this is strange behaviour, quite out of character for our normally fussy Electron. After all, we haven't assigned PI a value. Usually if we do something like:

**PRINT A**

without having first given it a value, the Electron comes up with:

**No such variable**

Well we haven't given PI a number, yet the micro accepts it in a PRINT command without so much as a murmur. What's going on?

The answer is that PI isn't a variable, it's a constant. That 3.14159265 — or 3.142 to its friends — is so useful a number that those awfully clever Acorn people have built it into the machine, available at the drop of a PI.

And PI stays at that value. You can't change it, as you'll find if you try:

**LET PI=89**

This PI is Pythagoras' Constant, that rather special number that mathematicians love. You've probably used it

to find the area of a circle which is PI times the square of the radius.

It's an amazing number, turning up in all sorts of unexpected places in maths — but what is it doing inside the Electron?

Before we answer that let's have a look at two more functions, RAD and DEG, which deal with angles.

Again you'll probably remember about angles from school, with things like "the interior angles of a triangle add up to 180 degrees" and "an angle of 90 degrees is called a right angle" burnt into your memory. Figure 1 shows some examples.

Figure 1: Angles and degrees

However while you may measure angles in degrees, the Electron uses a different system of measurement called radians. You're both measuring the same thing but using different units.

It's not unlike the way we have two scales for measuring temperature, Fahrenheit and Celsius. A Fahrenheit degree is not the same as a Celsius degree, each representing the same temperature with a different number. However, whether we call it 0 degrees Celsius or 32 degrees Fahrenheit, it's still freezing point.

It's the same with radians and degrees, they measure the same thing but in different units. And if you're really keen I'll tell you that one radian is the angle subtended at the centre of the circle by an arc of the same length as the radius of that circle.

# It's all a question of trigonometry

**PETE BIBBY turns to SIN, COS and PI**

Maybe Figure 11 will make that clearer. But don't worry if it doesn't, because the Electron will do it all for you, without you having to worry about radians.

Figure 11: A radian

It's easy. If you know the number of degrees in an angle then the RAD function converts this to radians. So if the angle is 45 degrees use:

**PRINT RAD(45)**

to give you the result:

**0.785398163**

Using RAD you can convert from degrees to radians without knowing much about either. Program 1 does it for you.

```
10 REM Program 1
20 INPUT "Give me an angle in degrees " angle
30 PRINT
40 PRINT "angle" degrees
   is the same as "RAD(angle)
   " radians"
```

Program 1

If you're like me you'll find all the long decimals produced by RAD rather difficult to remember. There is an easier way to think about them. Try:

**PRINT RAD(180)**

which, unless your Electron is

very different from mine, should result in:

**3.14159265**

Now doesn't this remind you of something? Like our old friend PI?

In fact an angle of 180 degrees measured in radians — or circular measure as it's sometimes called — is exactly PI radians. And an angle of 360 degrees is 2\*PI radians while one of 90 is 0.5\*PI radians. Try it and see.

This is how we normally talk about angles measured in radians, in terms of "so many" PI radians where "so many" is a positive number.

And it's here the constant PI comes in useful as is shown in Program 11, which converts degrees into radian measure in the "so many" PI form. Don't worry about @% for the time being, we'll deal with it later.

Table 1 shows some of the more significant radian measures:

Degrees	Radians
30	PI/6
45	PI/4
60	PI/3
90	PI/2
180	PI
360	2*PI

Table 1: Radians and degrees

```
10 REM Program 11
20 @%=@202
30 INPUT "Give me an angle in degrees " angle
40 PRINT
50 PRINT "angle" degrees
   is the same as "RAD(angle)
   /3.14159265 PI radians"
```

Program 11

Having spent so long on PI,

RAD and radians I'll now inform you that there's a Basic function that turns radian measures into degrees.

It's the aptly named DEG function. So, if your Electron has gone through a long and involved calculation and presented you with a result in radians, you can use DEG to convert it to the more meaningful degrees. Program III shows it in action:

```
10 REM Program III
30 INPUT "Give me an angle in radians " angle
40 PRINT
50 PRINT angle " radians is the same as "; DEG(angle) " degrees"
```

Program III

After all that, let's see what we can make of angles measured in radians. Again you'll probably be familiar with the trigonometric functions from the classroom. Figure III should brush up your memory.

The three basic trig functions — as they're known for short — are available on the Electron in the form of SIN, COS and TAN. If you want to know the sine of an angle, say 30 degrees, all you have to do is use SIN. However, beware. If you think that:

**SIN(30)**

will give you the sine of 30 degrees then think again. Remember that the Electron uses radian measure, not degrees as we do. So the 30 degrees has to be translated into radians using RAD and then this result is used inside the brackets of SIN. So:

**PRINT RAD(30)**

gives the radian equivalent of 30 degrees:

**0.523598775**

SIN then gets to work on this and:

**PRINT SIN(RAD(30))**

gives the result 0.5 which is the sine of 30 degrees.

However that's a bit longwinded. We can get the same effect with:

**PRINT SIN(RAD(30))**

provided that we're careful with our brackets. While you're at it you can find the cosine and tangent of 30 degrees using:

**PRINT COS(RAD(30))**

and:

**PRINT TAN(RAD(30))**

As well as having functions to allow you to determine the sines, cosines and tangents of angles, the Electron has functions to do the reverse. These are ACS, ASN and ATN. Their argument — the figure in the brackets — is taken to be a trigonometric value and the function produces the angle that corresponds to that value.

Suppose we knew that the number 0.5 is the sine of an angle, but we don't know which angle. We can then use ASN to tell us what the angle is. So SIN gives the sine of an angle while ASN determines the original angle from its sine.

To find the angle that has 0.5 as its sine we use:

**PRINT ASN(0.5)**

However the resulting:

**0.523598775**

isn't all that meaningful, is it?

It's an angle all right but it's measured in radians. The function DEG comes to our rescue as:

**PRINT DEG(0.523598775)**

shows. As before it's easier if we do both operations in the same step:

**PRINT DEG(ASN(0.5))**

Similarly ACS undoes the work of a cosine while ATN reveals the angle behind a tangent as:

**PRINT DEG(ACS(0.5))**

and:

**PRINT DEG(ATN(1))**

demonstrate.

Now you know about the trig functions what can you do with them? The answer is quite a lot. The trouble is that it's mostly in mathematical applications that are really beyond the scope of a beginner's series or in graphics.

Happily there's a graphics series starting in *Electron User* soon so you'll get plenty of opportunity to use your new found knowledge.

In the meantime let's try out our trig functions on the rather artificial problem shown in Figure IV.

Have you ever been one of those summer fairs where the army has an aerial runway? It's a tower with a rope running to the ground at a shallow angle. Intrepid or lemming-related fun-lovers hurl themselves off the tower using a pulley to slide down the rope in safety if not in comfort.

Now while the length of the tower is fixed — we'll assume 100 units — the angle between

the rope and the ground, and hence the length of rope needed, varies with the distance of the landing point from the tower. The shallower the angle the longer the rope.

Program IV allows you to try out different distances from the tower, giving you the angle and rope length in each case.

```
10 REM Program IV
20 towerHeight=100
30 INPUT "How far away is the landing point from the tower? " groundLength
40 angle=ATN(towerHeight/groundLength)
50 ropeLength=towerHeight/SIN(angle)
60 PRINT
70 PRINT "The rope length is ";ropeLength
80 PRINT
90 PRINT "The angle is ";DEG(angle) " degrees"
100 PRINT
```

Program IV

As I've said it's a fairly artificial problem but it does show the trig functions in use.

Try altering it to solve other aspects of the tower problem. Suppose the rope was only 200 units long. What's the maximum distance the landing point can be from the tower? And see what happens if you decide the distance will be zero (presumably you're abseiling!). Can you mugtrap the input to avoid this error?

● All that should keep you busy until next time when we'll be exploring that mysterious @% and looking at alternatives to INPUT.

Figure III: Trigonometric functions

Figure IV: Tower and triangles

# A NEW BREAKTHROUGH!!!

**AT LAST!**

## SLOGGER

### THE ELK TURBO-DRIVER

(DESIGNED BY ANDYK LTD)

PUTS YOUR ELECTRON INTO OVER-DRIVE

INCREASES THE SPEED OF YOUR ELECTRON COMPARABLE TO THE BBC

The ELK TURBO/DRIVER opens up new worlds  
for the discerning serious owner and is also a must  
for all experienced games players!

## No longer be frowned upon by BBC owners

THE METAMORPHOSIS CAN NOW BE ACHIEVED

★★ UP TO 100% IMPROVEMENT IN SPEED ★★

★★ ABLE TO RUN BBC SOFTWARE (Non Mode 7)

WHERE SPEED WAS THE LIMITING FACTOR ★★  
(Such as Acornsoft's Aviator Flight Simulator)

★★ MAKES ELECTRON SOFTWARE RUN FASTER ★★

CAN BE SWITCHED BETWEEN NORMAL AND "TURBO-DRIVE"

★★ OPERATES IN ALL ELECTRON MODES ★★

★★ NO SOFTWARE MODIFICATION REQUIRED ★★

★★ COMPATIBLE WITH ALL ADD-ONS

Plus 1, Plus 3, Rombox, Adaptor Boards, etc) ★★

Your upgraded Electron will be returned within 7 days of receipt by SLOGGER

**All Inclusive ONLY £42.00 (VAT included)**

*Fitted, Tested, Including switch, carriage paid both ways PLUS 1 YEARS WARRANTY*

**WHEN ORDERING PLEASE QUOTE T-D1 ON ORDER FORM**

The Upgrade "TURBO-DRIVER" Kit available (including switch) **£29.95 Incl. P&P**

**PLEASE QUOTE ON FORM T-D2**

# ROMBOX

Want to make serious use of your Electron? ... Then fit the ROMBOX and you will have access to a wide range of ROM based software (including many BBC ROMs).

- ★ Superb value for money.
- ★ Runs all good (non mode 7) BBC ROM software.
- ★ Fully compatible with Plus 1 and Plus 3.
- ★ Up to 8 ROMs instantly selectable.
- ★ Supports 8K and 16K sideways RAM.
- ★ Allows further expansion at rear.

**ONLY £44.95**

## STARWORD (16K ROM)

A Professional word Processor for UNDER £35  
★ Does everything VIEW does plus MUCH MORE!  
Designed for the home user, education or small business needs, STARWORD enables even those with limited typing skills to produce and print letters, manuals or reports using the Electron.

- ★ Easy to use.

**ONLY £34.50**

## STARSTORE (ON ROM)

Store and retrieve your names and addresses or any other information with the STARSTORE DATABASE, written specially for the Electron. STARSTORE works with STARWORD for personalising standard letters (mailmerging).

**ONLY £29.95**

## PRINTER DRIVER for STARWORD

Use most printers with STARWORD  
**Cassette £7.95 ROM £9.95**

## SLOGGER BUSINESS PACKAGES

ROMBOX-P + STARWORD  
+ STARSTORE + FREE PRINTER ROM.  
**ONLY £120.00 BP1**  
ROMBOX + STARWORD  
+ STARSTORE  
**ONLY £105.00 BP2**

**TAPE TO DISC FOR CUMANA TP2CU**  
**£19.95**

**STARWORD FOR CUMANA** £34.50

**Also available:**  
Vine Micro's ADDCOMM (£28.00)  
Plus 1 ROM upgrade £7.95

**Also available:**  
A wide selection of Rom Software from other leading manufacturers. Please phone for details.

## AND NOW ... ROMBOX-P

Offers all the features of ROMBOX Plus built-in centronics printer interface and FREE Printer ROM (worth over £20).

- ★ Up to 8 ROMs instantly selectable.
- ★ Selectable 8/16K Print buffer to increase throughput.
- ★ Ideal as a word-processing station with Plus 3 fitted.
- ★ FREE Printer ROM included.
- ★ Superb value for money at **ONLY £69.95**

## STARMON

- ★ Display of memory in: ASCII and binary, decimal, octal or hexadecimal
- ★ Full support of sideways ROMs.
- ★ Comprehensive debugging facilities, including breakpoints, traces and events.
- ★ "a very professional piece of firmware" ... Acorn User.

**ONLY £22.50**

## ELKMAN

The most powerful ROM manager on the BBC is now available for the Electron.

**ONLY £17.50**

## 16K SIDeways RAM for ROMBOX

- ★ Fully compatible with Plus 1, Plus 3, etc.
- ★ No soldering.
- ★ Complete with RAMs.
- ★ Write protect option.

**ONLY £29.95**

## PRINTER ROM

Allows use of sideways RAM as 8K or 16K print buffer and offers a host of useful utilities for EPSON printers. Ideal for all your printing requirements.

- ★ Electron/BBC compatible.

**ONLY £24.95**

## STARGRAPH

Graphics Rom giving screen dump to EPSON printer, printing of text at any angle or any size, circle, ellipse polygons, arc, dotted lines, colour filling plus more.

**ONLY £21.95**

## T2P3

Transfer the majority of cassettes Tapes 2 Plus 3 disk system, for much faster loading.

**ONLY £19.95**

**DICER** is a simulation of a compelling, traditional dice game which can be played by one to four players. The object is to get the highest score possible by using a set of five dice to tick off each one of a special list of scoring combinations.

Players take turns at throwing the dice, each turn consisting of a maximum of three throws. After each of the first two throws you may:

- Throw all the dice again.
- Hold selected dice and throw the rest.
- Accept the throw as seen.

On the third throw of the dice you must accept the dice shown.

Your task – and the crux of the whole game – is to choose one of the available scoring combinations for that turn's score. Once you've chosen an option you can't pick it again, so take care.

Having made a valid selection your score for that option is calculated and displayed on the score sheet, your running total is updated, and play passes to the next person. The game cycles round all the players until everyone has had

13 turns – sufficient to cover all the scoring combinations possible.

If you should wish to hold some of the dice and re-throw the others, first answer Y to the re-throw prompt.

You will then see displayed above the dice five tick symbols. These indicate the die or dice that will be re-thrown. Selecting the number of the dice that you

wish to retain will change the tick to a cross symbol.

If you find you have made an error, entering the number of the appropriate dice will change its symbol back to a tick. Once you are satisfied with your selection, confirm it by pressing the Spacebar and the remaining dice will be thrown again.

When you decide to accept a throw, enter N at the

re-throw prompt and you will be asked to enter the category number in which you wish your score to be entered.

There are two sections to the score sheet. The upper section simply totals the number of like dice as shown in Figure 1. The lower section consists of special scores based on special combinations such as triplets, as shown in Figure 2.

Should the total scores achieved in the upper section – options 1 to 6 – be greater than 61, a bonus of 30 points is awarded.

There will be occasions when the combination displayed after three turns does not match any of the remaining scoring options. You might, for instance, have chosen it earlier.

Should this occur you must pick one of the outstanding options – which will be ticked off the list for a score of zero. The point is that you must always score something at the end of your turn, even if it is a zero.

You'll find Dicer intriguing, thought-provoking and infuriating. Do yourself a favour – type it in today.

**DICER!**  
by Robert and Michael Crowe

## FUNCTIONS

<b>FNval1-6</b>	Used to calculate score.
<b>FNdicetot</b>	Totals all five dice.
<b>FNnumber%(no%)</b>	Calculates how many numbers thrown.
<b>FNreplay</b>	Another game?

## ARRAYS

<b>cat%(4,13)</b>	TRUE when category used.
<b>dice%(5)</b>	Each dice's value.
<b>total%(4)</b>	Player's current score.
<b>true%(5)</b>	TRUE when re-throw required.
<b>sc%(4,13)</b>	Stores each player's score in each category.

## MAJOR VARIABLES

<b>goes%</b>	Round number.
<b>times%</b>	Player's turn.
<b>tries%</b>	Number of re-throws for current player.
<b>pl%</b>	Number of players.
<b>dot%</b>	Puts dots on dice.
<b>c%</b>	Chosen category.
<b>name\$</b>	Category name.

<b>envelope</b>	Defines SOUND envelope.
<b>colour</b>	Changes colour.
<b>characters</b>	Defines characters.
<b>players</b>	Prompts for number of players.
<b>variables</b>	Initialises arrays.
<b>set_up</b>	Sets up screen.
<b>window</b>	Clears text window.
<b>cancel</b>	Toggles tick and cross signs.
<b>choose</b>	Prompts for re-throw.
<b>throws</b>	Random number generator for dice.
<b>draw</b>	Draws dice.
<b>dice</b>	Prints ticks and crosses.
<b>cat</b>	Category input.
<b>value</b>	Works out points scored.
<b>printscore</b>	Updates and prints totals.
<b>addition</b>	Calculates final totals.

## W O R D S

### The ANSWER BACK QUIZ Series (BBC and Electron)

**ANSWER BACK - JUNIOR** (C9.95 cassette, £10.95 disc)  
An enormous collection of general knowledge quizzes and a superb fairy-tale game for the 6-11 year olds.

**ANSWER BACK - SENIOR** (C9.95 Cassette, £10.95 disc)  
A space game and a gigantic collection of general knowledge quizzes. Ages 12-Adult.

**ANSWER BACK - SPORT** (C9.95 Cassette, £10.95 disc)  
Two sports games and a massive series of quizzes on all the popular sports. Ages 14-Adult.

#### ANSWER BACK Program Features:

- Unlimited quiz creation, editing and saving facilities. (No knowledge of programming required).
- Multiple choice, True-False and complete-the-answer modes.
- Immediate display of mistakes; performance summary and optional re-run of questions incorrectly answered.
- Correct answers gain further turns in the compelling games.

### The FACTFILE 500 Series (BBC and Electron)

Each pack contains a supplementary database of 500 questions and 2000 multiple choice answers for use with the above ANSWER BACK programs. The modules have been compiled by teachers, experts and specialists.

<b>NATURAL HISTORY</b> (Ages 10+)	£3.95 Cassette, £5.45 disc
<b>ARITHMETIC</b> (Ages 8-11)	£3.95 Cassette, £5.45 disc
<b>SPELLING</b> (Ages 8-12)	£3.95 Cassette, £5.45 disc
<b>ENGLISH WORDS</b> (Ages 12+)	£3.95 Cassette, £5.45 disc
<b>KNOW ENGLAND</b> (Ages 12+)	£3.95 Cassette, £5.45 disc
<b>KNOW SCOTLAND</b> (Ages 12+)	£3.95 Cassette, £5.45 disc
<b>FIRST AID</b> (Ages 13+)	£3.95 Cassette, £5.45 disc
<b>GENERAL SCIENCE</b> (Ages 14+)	£3.95 Cassette, £5.45 disc
<b>SUPERSPORTS</b> (Ages 14+)	£3.95 Cassette, £5.45 disc

All prices include VAT, P&P and 24-hour despatch.  
Send cheque, PO, ACCESS number or an official order.  
Detailed catalogue available on request.

## TWO WAYS TO ENSURE YOU GET

# electron

user

## EVERY MONTH

1. Complete and mail subscription form on Page 61.
2. Hand this form to your newsagent.

Please reserve me a copy of Electron User magazine every month until further notice.

☐ I will collect

☐ I would like it delivered to my home.

Name \_\_\_\_\_

Address \_\_\_\_\_

Note to newsagent: Electron User should be obtained from your local wholesaler, or contact Steve Fletcher, Circulation Manager on 0293 27053.

LAST time we saw how to use Osword &72 to read and write data from or to the disc. This month we'll use the same method to produce a sector editor, a utility that will enable us to modify the contents of the disc.

It not only allows files to be edited, but directories as well and this will enable filenames and load and execution addresses to be altered. It can even be used to recover deleted files.

When the editor is run you'll be asked for a disc address in hexadecimal. Enter any number between 0 and 4FF. This is the sector number counting from sector zero on track zero. The sector selected is now loaded into RAM and displayed in both hexadecimal

and Ascii.

There are quite a few control keys to remember so I've listed them in Table 1.

Each sector is 256 bytes long but only 128 bytes are displayed on the Mode 6 screen. Shift+cursor up displays the first 128 bytes and Shift+cursor down the second 128.

Square brackets enclose the byte to be altered in the hex dump and the cursor flashes underneath the corresponding Ascii character on the

right of the screen. The four cursor keys when used on their own allow you to move throughout the 128 bytes displayed.

Shift+cursor right moves on to the next sector while Shift+cursor left moves back a sector. To move quickly across the disc a track at a time use Ctrl+cursor left or right.

To alter a byte press either A to input an Ascii character or H to input the new value in hexadecimal. Note however that this only alters the copy of

the sector that has been loaded into RAM. The disc remains unaltered.

The altered sector can be written to the disc by selecting S to save it. You'll see a flashing message at the bottom of the screen asking for confirmation. Pressing Y will save the sector and N will leave it as it was.

A sector editor is a very powerful and essential tool for the disc owner. Be careful though – you can quite easily destroy the contents of a disc.

## Disc content? Call in the sector editor!

### BBC/ELECTRON PROFESSIONAL SOFTWARE

Our educational software is used in thousands of schools and homes throughout Great Britain.

#### EDUCATIONAL 1

Hours of fun and learning for children aged five to nine years. Animated graphics will encourage children to enjoy counting, maths, spelling and telling the time. The tape includes six programs: MATH 1, MATH 2, CUBECOUNT, SHAPES, SPELL and CLOCK.

... 'An excellent mixture of games' ... *Personal Software* - Autumn 1983

BBC/ELECTRON

Tape £6.95 Disc £8.95

#### EDUCATIONAL 2

Although similar to Educational 1 this tape is more advanced and aimed at seven to twelve year olds. The tape includes MATH 1, MATH 2, AREA, MEMORY, CUBECOUNT and SPELL.

BBC/ELECTRON

Tape £6.95 Disc £8.95

#### FUN WITH NUMBERS

These programs will teach and test basic counting, addition and subtraction skills for four to seven year olds. The tape includes COUNTING, ADDING, SUBTRACTION and an arcade type game called ROCKET MATHS which will exercise addition and subtraction. With sound and visual effects.

These are excellent programs which teachers on the project have no hesitation in recommending to other teachers. ... *Computers in Classroom Project*.

BBC/ELECTRON

Tape £6.95 Disc £8.95

#### FUN WITH WORDS

Start your fun with alphabet puzzle, continue your play with WORDS, learn the difference between THERE and THEIR, have games with SUFFIXES and reward yourself with a game of MANXMAN.

... 'Very good indeed' ... *ASB Computing* - Jan/Feb 1984

BBC/ELECTRON

Tape £6.95 Disc £8.95

#### JIGSAW AND SLIDING PUZZLES

There are two jigsaw and four sliding puzzles on a 3 x 3 and 4 x 4 grid. Each program starts off at an easy level to ensure initial success but gradually becomes harder. It helps children to develop spatial imagination and in solving problems. The tape includes: OBLONG, JIGSAW, HOUSE, NUMBERS, CLOWN and LETTERS.

BBC/ELECTRON

Tape £6.95 Disc £8.95

P&P = £2.00

However you can just as easily restore a corrupted disc as well. Experiment with the editor using a disc which has nothing valuable on to begin with.

Try examining a few discs and see what's there. Find out what happens to the contents when you delete a file, by examining it before and after. ● Next time we'll see how to restore deleted and corrupted files and we'll write a recover utility.

Cursor	Move throughout the display
Shift+cursor up/down	Display first or second 128 bytes
Shift+cursor left/right	Move back or forward one sector
Ctrl+cursor left/right	Move back or forward one track
A	Ascii input
H	Hexadecimal input
S	Save the sector

calculates point  
on circle's edge

relative plotting

10,20 Label the program. Everything on a line after a REM is ignored by the micro.

30 Puts the Electron into Mode 0, the two colour, high resolution mode. This uses up a lot of memory, 20k, but since the program is so short it's not a problem.

40 Moves the graphics origin - the zero point for the MOVE and DRAW commands - to the centre of the screen.

50-100 Form a FOR...NEXT loop with control variable loop. This cycles 24 times as loop goes from 0 to 360 in steps of 15. If this reminds you of your school geometry, full marks. It's no coincidence that there are 360 degrees in a circle.

60 Uses the function RAD to convert the value of loop into a number of radians and stores them in angle. This is done because the functions COS and SIN work in radian measure, not the more familiar degrees.

70,80 Use SIN and COS to calculate the coordinates of a point on a circle centred on the origin and with radius 200.

90 Calls PROCtriangle using the coordinates calculated in the previous two lines. As the loop cycles each of these pairs of coordinates will be positioned further round the circumference of the circle. The

result is the circle of triangles.

110 Stops the program crashing into the procedure definition.

120-170 Make up the procedure which draws the triangle. When it's called from the main program values are passed to the procedure to use in place of the dummy variables, x and y.

130 MOVES the graphics cursor to the point x,y. Each time the procedure is called x,y will be further round the circle.

140 The PLOT 1,50,50 command tells the Electron to draw a line from the present position of the graphics cursor to the point which is 50 units further along the X axis and 50 units further up the Y axis. Notice that these coordinates are relative, not absolute. If the graphics cursor is at x,y then PLOT 1,50,50 will move the graphics cursor to x+50, y+50.

150,160 Also draw lines using relative plotting. Three lines are drawn and, as the totals of the relative X and Y coordinates are 0 and 0 respectively, they come back to the starting point. A triangle is born!

170 Ends the procedure. Can you write one that produces rectangles or stars or even circles?

Try adding these lines and see what happens to the triangles:

```

44 BCOL 3,3
46 FOR T=1 TO 5
100 NEXT T
100 PROCtriangle(x,y)
    
```

Trevor Roberts

**TIMEPIECE** is a superb graphics program which animates the hands on a fob watch.

When the program is **RUN** a set of arrays are initialised to speed up the drawing of the watch.

This takes quite some time - no pun intended - so please be patient.

Once this is complete the fob watch is drawn on the screen with great speed and you can enter the correct time.

You can reset this by pressing the **Shift** key once the hands are moving.

Now you can sit back, relax and enjoy the superbly animated hands as they sweep around the clock face.

# TIMEPIECE

By **KEN GOODACRE**

## PROCEDURES

array	Initialises data arrays.
case	Draws sections of the case.
seconds	Updates second hand.
minutes	Updates minute hand.
hour	Updates hour hand.
init	Initialises variables.
error	Traps program errors.
knurl	Draws knurl at top of watch.
face	Draws clock face.
name	Draws name on clock face.
set	Sets clock to specified time.
reset	Erases hands from clock face.
strike	Sounds chime each hour.

## Timepiece listing

Never before have there been such money-saving offers for readers of a computer magazine!

# EXPAND your Electron

... for much, much less than the price you'd normally pay

## How the Plus 1 helps you make the most of your Electron

With the Plus 1, you and your Electron enter a whole new computing dimension. The Plus 1 turns your Electron into a fully fledged micro capable of using printers, joysticks and cartridge ROMs – the software that comes on a chip. In addition, the Plus 1's analogue to digital port gives access to the outside world – while the slots for the ROM cartridges allow the Electron to take advantage of the latest, most exciting hardware developments yet to be released.

*If you want to use your Electron to the full, then it's essential you get a Plus 1.*

## EXPAND - with the Electron Workstation

Now you can transform your Electron into a serious micro Workstation. This package consists of a Plus 1 and the wordprocessor and Viewsheet spreadsheet, both on cartridge. Workstation makes the Electron a hard-working yet inexpensive and office. From business letters to your first novel, from cash flow crises, it can take them all in its stride.

Normal price £119.80

Electron User

## EXPAND - with the Electron Database

Bring the speed of discs and the organised memory of a personal computer to your Electron with the Electron Data Manager. It connects your Electron with Acorn's official disc-based Database – a disc that keeps track of things quickly, reliably and efficiently. Sophisticated, fast, the Data Manager is a must for all serious Electron users.

Normal price £248.95

## EXPAND – with the Electron Language Lab

Now you can dramatically extend your programming horizons with this exclusive offer from Electron User. It comes complete with the Plus 1 interface and the Pascal and Logo cartridge ROMs. The Language Lab frees you from the limitations of Basic by giving you the two most educationally favoured high level programming languages – Logo and Pascal.

**LOGO:** Acclaimed by teachers, parents and pupils alike, it's the language that's put the fun back into learning the fundamentals of programming. It's simple enough for a child to use, yet complex enough to satisfy the most exacting computer buff.

**PASCAL:** The language that's set the computer world ablaze. When you've programmed in Pascal you'll wonder why you ever used anything else. Powerful, elegant, yet easy to learn, it's a fascinating language designed to improve both programming and programs.

With these exciting languages available instantly on ROM, the Language Lab gives your Electron two new, exciting and very different personalities. It's the best package for the Electron yet. No programmer will want to be without it. And it comes to you at **LESS THAN HALF** the usual price!

Normal price £197.90

**Electron User price £89.95**

## JOYSTICKS— THE COMPLETE SOLUTION

### DELTA 3B SINGLE—BBC B or ELECTRON PLUS 1 £12.00

A single joystick that in some ways can act as two. The custom made special "low noise" potentiometers are wired so that it will work as a left hand or right hand joystick. It can even run some programs written for two joysticks and has the fire buttons of both.

### DELTA 3B TWIN—BBC B or ELECTRON PLUS 1 £19.95

A direct but improved alternative for the original ACORN joysticks, with 2 joysticks wired to one plug. As with all our joysticks they have the fast action sprung to centre return of the steel shafted nylon covered joystick. The light action makes them ideal to hold and the 3 fire buttons allow left or right-handed use.

Available from your dealer  
or direct from us

THOSE of you who have used light pens on the Electron will have discovered their limitation — low resolution. This is because a light pen can only respond to a character-sized cell.

Sometimes this is overcome by introducing a drag factor whereby a cursor is dragged in the general direction the pen is moving, giving the illusion of pixel resolution.

However this can be clumsy, and only works if the pen is moving — not ideal for drafting.

The Tarantula Touch Tablet from Wigmore House works in a similar way to a light pen except that the tablet takes the place of the screen and will give you pixel resolution.

It is small enough to fit neatly beside your Electron, but can easily be moved to a more convenient position as it comes with a metre of flex. It connects into the ADVAL port of the Plus 1.

You draw on the tablet with a pen which is connected to it by about half a metre of wire. A button on the end of the pen switches it on and off.

Being triangular rather than round, the pen is easy to hold and the button comfortable to press.

The program accompanying the Tarantula is Mousepaint, the same program used by the Wigmore trackball with a few extensions. (We reviewed the trackball in the October 1985

# Try a tablet for pixel resolution

ROBIN NIXON tests the Tarantula Touch Tablet

issue of *Electron User*.)

Mousepaint runs in Mode 1. Down the right hand side of the screen is a menu of icons

and letters showing the options available.

To select from the menu you touch the corresponding area on the tablet with your pen and press the button.

Some of the many options available are listed in the adjoining panel.

Let's follow one of these options through in practice. To draw a rectangle you first move to the rectangle icon and press the switch.

Then move over to one corner of the rectangle and press the switch again.

Now as you move the pen you see a rectangle being dragged about. When you are satisfied with its size and position you press the switch again and the rectangle is fixed in place.

The horizontal/vertical line draw is a nice idea which I used a lot.

You plot two points roughly

where you want a line to be and the program will put the line exactly in place. This is very useful if your hands are still shaking from the night before or you accidentally jerk the pen at the last moment.

The program is so easy to use that the only time you need to touch the keyboard is when you are entering text.

On selection of the text icon a prompt appears in a small window at the bottom of the screen. You then type in your text, press Return, move the pen to where you want the text to go, and press the button.

All in all this is a nice package which has many applications, from designing your own screens and title pages to quite sophisticated technical drawing.

As the software's in Basic and is unprotected you can adapt the Tarantula so that it grows with your needs.

- ★ **Freehand sketching.** What you draw is what you get.
- ★ **Line rubber-banding.** After plotting a start point a line is stretched between it and wherever the pen is positioned until the button is pressed, when the line is fixed in place.
- ★ **Rectangle rubber-banding.** As with line rubber-banding, only producing rectangles.
- ★ **Horizontal/vertical line draw.** A feature to make perfect horizontal or vertical lines out of slightly diagonal ones.
- ★ **Circles.** Where you plot the centre and a point on the circumference.
- ★ **Dotted lines.** As with line rubber-banding but dotted.
- ★ **Text.** This enables you to enter text anywhere you want it on screen.
- ★ **Fill.** A partial fill which may need to be used several times to fill large, complicated shapes.

Some of the options available using the Tarantula Touch Tablet

# Ready Reference

Collect the Electron User Ready Reference charts – and have all the facts at your fingertips!

## ASC

Returns the Ascii code of the string inside the brackets. Hence:

```
PRINT ASC("a")
```

gives 97. Notice that:

```
strings="centigrade"  
PRINT ASC(strings)
```

just gives the Ascii code of the first letter of the string.

## STRINGS

Used to create large strings from smaller ones. So if you want a line of 20 asterisks you can use:

```
asterisks=STRINGS(20,"*")  
PRINT asterisks
```

It's recommended when using a lot of spaces, as it's easier to accurately enter:

```
PRINT STRINGS(10,"* ")
```

than:

```
PRINT "          "
```

though:

```
PRINT STRINGS(10,CHR$(32))
```

is even clearer.

## CHR\$

Translates an Ascii code into the character it represents. So:

```
PRINT CHR$(65);CHR$(66);  
CHR$(67)
```

gives:

ABC

You can also use the Ascii control codes, so:

```
PRINT CHR$(7)
```

rings the bell while the printer can be turned on and off with:

```
PRINT CHR$(12)  
PRINT CHR$(13)
```

## LEN

Provides the answer to the question: "How long is a string?" It gives the number of characters in a string. Hence:

```
PRINT LEN("centigrade")
```

returns 10. Notice that:

```
PRINT LEN("-12")
```

gives the answer 3. The minus sign counts.

## STR\$

Turns a number or expression into a string. So if you've got a number 32 and you want it to be a string you use:

```
strings=STR$(32)
```

Notice that it is now a string. You can't do maths with it as you'll see if you try:

```
PRINT strings *2
```

# MicroLink

Your personal passport to the world of communications with

**TELECOM GOLD**

Telecom Gold is a trademark of British Telecommunications plc

## What it offers the Electron user...

### Electronic mail is much cheaper than the post

Sending mailbox messages to other subscribers, whose numbers are rapidly growing, is the cheapest form of communication possible. You can send a message of any length to another mailbox for less than the cost of a first-class stamp. And it doesn't cost a penny more to send the same message to 500 different mailboxes! Even a message sent to a mailbox on the other side of the world only costs 30p.

### The biggest bulletin board of them all

The number of bulletin boards is growing rapidly. The only snag is that the vast majority are single-user boards – which means lots of other people are also trying to make contact and all too often all you get is the engaged tone. But with the MicroLink bulletin board there is no limit to the number of people using it at the same time. And no limit to the number of categories that can be displayed on the board.

### Give your micro mainframe power

With MicroLink your micro becomes a terminal linked directly to the Telecom Gold mainframe computer, and able to tap its tremendous power and versatility. Right away you'll be able to use giant number-crunching programs that can only run on a mainframe.

### The mailbox that is always open

MicroLink is in operation 24 hours a day, every day. That means you can access your mailbox whenever you want, and from wherever you are... home, office, airport – even a hotel bedroom or golf club! No-one needs to know where you are when you send your message.

### We're only a local phone call away

The majority of MicroLink subscribers can connect to our mainframe computer in London by making a local phone call. This is possible because they use British Telecom's PSS system, which has access points all over Britain. A local phone call is all you need, too, for direct access via MicroLink to all the other countries belonging to the international Dialcom system.

### Telemessages – at a third off

The modern equivalent of the telegram is the telexmessage. Send it before 10pm and delivery is guaranteed by first post the following day (except Sunday). The service was intended for people phoning their message to the operator, which costs £3.50 for 50 words. But you can now use it via MicroLink, for only £1.25 for up to 350 words! For an extra 65p your message can be delivered in an attractive greetings card.

### Go teleshopping on your micro

With MicroLink you can study the British Rail timetable – and then buy your ticket in advance. You can book theatre tickets. And even order a bouquet of flowers. It's all part of the tele-shopping revolution!

### Send and receive telex messages

With MicroLink you can turn your micro into a telex machine, and can send and receive telex messages of any length. You will be able to communicate directly to 96,000 telex subscribers in the UK, 11 million worldwide – and even with ships at sea via the telex satellite network. Business people can now send and receive telexes after office hours, from home or when travelling.

### What does it all cost?

Considering all the services you have on tap, MicroLink is remarkably inexpensive. You pay a once-only registration fee of £5, and then a standing charge of just £3 a month. On-line costs are 3.5p a minute (between 7pm and 8am) or 11p a minute during office hours. There is an additional 2.5p a minute PSS charge if you are calling from outside the 01-London call area. Charges for telex, telemessages and storage of files are given on the next page.

# How much it costs to use MicroLink

**Initial registration fee:** £5.

**Standing charge:** £3 per calendar month or part.

**Connect charge:** 3.5p per minute or part - cheap rate; 11p per minute or part - standard rate.

Applicable for duration of connection to the Service. Minimum charge: 1 minute. Cheap rate is from 7pm to 8am, Monday to Friday, all day Saturday and Sunday and public holidays; Standard rate is from 8am to 7pm, Monday to Friday, excluding public holidays.

**Filling charge:** 20p per unit of 2,048 characters per month.

Applicable for storage of information, such as telex, short codes and mail files. The number of units used is an average calculated by reference to a daily sample.

**Information Databases:** Various charges.

Any charges that may be applicable are shown to you before you obtain access to the database.

**MicroLink PSS service:** 2.5p per minute or part (300 baud); 3p per minute or part (1200/75 baud).

Only applies to users outside the 01-London call area.

**Telex registration:** £10.

**Outgoing telex:** 5.5p per 100 characters (UK); 11p per 100 (Europe); 18p per 100 (N. America); £1.25 per 400 (Rest of world); £2.75 per 400 (Ships at sea).

Deferred messages sent on the night service are subject to a 10 per cent discount.

**Incoming telex:** 50p for each correctly addressed telex delivered to your mailbox. Obtaining a mailbox reference from the sender incurs a further charge of 50p.

It is not possible to deliver a telex without a mailbox reference. If a telex is received without a mailbox reference the sender will be advised of non-delivery and asked to provide a mailbox address.

Each user validated for telex and using the facility will incur a charge of 6 storage units a month. Further storage charges could be incurred depending on the amount of telex storage and the use made of short code and message file facilities.

**Telemessages:** £1.25 for up to 350 words.

Telemessages can be sent with an illustrated greetings card for 65p extra.

**Radiopaging:** No charge.

If you have a BT Radiopager you can be paged automatically whenever a message is waiting in your mailbox.

**International Mail:** For the first 2,048 characters - 20p to Germany and Denmark; 30p to USA, Australia, Canada, Singapore, Hong Kong and Israel. For additional 1,024 characters - 10p; 15p.

These charges relate to the transmission of information by the Dialcom service to other Dialcom services outside the UK and the Isle of Man. Multiple copies to addresses on the same system host incur only one transmission charge.

**Billing and Payment:** All charges quoted are exclusive of VAT. Currently all bills are rendered monthly.

## Software over the telephone

MicroLink is setting up a central store of software programs which you'll be able to download directly into your micro. The range will include games, utilities, educational and business programs, and will cover all the most popular makes of micros.

## Talk to the world - by satellite

MicroLink is part of the international Dialcom network. In the USA, Australia and a growing number of other countries there are many thousands of users with electronic mailboxes just like yours. You can contact them just as easily as you do users in Britain - the only difference is that the messages from your keyboard go speeding around the world via satellite.

## What you need to access MicroLink

You must have three things in order to use MicroLink: a computer (it can be any make of micro, hand-held device or even an electronic typewriter provided it has communications facilities), a modem (it can be a simple Prestel type using 1200/75 baud, or a more sophisticated one operating at 300/300 or 1200/1200 baud), and appropriate communications software.

# MicroLink

# Give the bricklayer his marching orders

**ROBIN NIXON** presents an entertaining teaching aid for young children

**MARCHING** Order is designed as an aid to teaching simple numeracy and ordering of numbers between 1 and 9.

The program is in two sections. In the first the pupil is shown a group of numbers which light up in turn.

As each number appears the pupil must press the Spacebar the same number of times. For each press a brick will appear above the number.

Delete can be used if too many bricks are chosen and

Return confirms selection. In the second section the pupil must place the numbers in the correct order to enable a man to march up the bricks.

To arrange the bricks in the correct order the pupil presses the Spacebar until a man appears under the lowest number. The bricks above this number then re-position themselves at

the bottom of the screen when Return is pressed.

When all the bricks have been re-positioned in the correct order the pupil is rewarded with a short animated sequence.

At the end of each game

the selection menu is re-displayed so that you can change the level of difficulty should you wish to do so.

# Off into the

# sunset - with a blast

**YOU** may remember my asking in November's column whether anyone had managed to get out of the repository in *Classic Adventure*.

Well H. Bastien has written in to say how it can be done, thus earning himself a copy of Pettigrew's Diary.

Go to the second room of the repository and get the black rod. Take it to the first room and drop it.

When you are back in the second room type in **BLAST**. Some elves will carry you off into the sunset.

Neither of us can figure out why this should work, but it does.

This is obviously not the end of the game as it can be done with only 14 treasures. Has anyone managed to solve it yet?

Peter Bailey and Ian Horsham say that the following BBC games work on the Electron - *Escape from Pulsar 7*, *Ten Little Indians* and *Secret Mission*.

Brian Rodwell wants to know if I have considered writing a book of hints and tips for frustrated adventurers. Does anyone else think this would be a good idea?

R. Henderson has sent in a tip for *Adventure*. He says that it is easy to press the *Escape* key by accident and that typing \*FX229, 1 will disable it.

This is obviously a good tip for any program that doesn't disable the *Escape* key.

Paul Campbell wants to

know whether *Terrormolinas* from Melbourne House is available for the Electron. The version released is suitable for both the BBC Micro and the Electron.

Several people have written in over the last couple of months about Rog Frost's review of *Greedy Dwarf*.

Lou Carey doesn't agree with Rog and writes that he finds the game slow and awkward to play.

Martin Beint, on the other

hand, agrees with Rog and goes on to say that it was this game that first got him hooked on adventures.

The whole point of a review is to give readers a critical, informed, but above all fair opinion about a piece of software.

However it is still one person's opinion, and as such is not going to please everybody.

Stuart Kelly and Geoff Larsen both feature in the Hall

of Fame this month. Stuart, judging by his 52,680 high score on *Snapper*, is as much at home with arcade games as adventures, and Geoff is an ex-Spectrum and ZX-81 adventurer who has now bought an Electron and is avidly devouring the games available.

## CORNER PROBLEM

*Before we look at some answers to readers problems, I have had a couple of letters recently that have caused me to ask those of you who write in to make sure that you are precise about the help you want and the way you ask for it.*

*One letter from a reader in Northants proved to be mainly illegible. Another asked for help with five adventures but didn't tell me where he was stuck, and yet another asked me if I could help but neglected to mention the adventure.*

*I welcome letters from anybody, but, please, if you have a question, make sure you give me as much information as possible.*

Tony Bevan asks for help with *Repton*. He wants to know all the passwords and threatens to throw the game away if I don't tell him.

The passwords are Chameleon, Terrapin,

## FEEDBACK

J. Scott writes, following Helen William's problems with *Manic Mole*, that she should leave out line 1070, which stops the screen becoming invisible and that leaving out line 1250 stops the girders melting in screen 4.

Matthew Pyecroft has written in to answer Carl Marlow's problem with *Fighter Pilot*. Apparently accelerating and pressing the UP key works 50 per cent of the time, and if this fails he can always press Caps Lock and invoke the automatic landing approach option.

Matthew goes on to give some tips for *Crown Jewels*. There is no Telecom Tower location, use TORCH ON in the Chamber of Horrors and you cannot attract the attention of the policeman or tower guard.

Lou Carey gives fuller information on the toad poisoning in *Galadriel in Distress*:

- To get the toad out of the pond you must examine the cake to get the fly and then FEED FLY TO TOAD.
- To find the antidote to the toad poisoning you must examine the pond and pull the plug. Once the pond has drained you should examine it again to find the bottle. If you examine the bottle and the goblet you will find they both have writing on. Take both of them to the loremaster for deciphering.

The secret is that both are poison and that to nullify them you have to drink from both at the same time. Try DRINK FROM BOTTLE AND GOBLET.

## From Page 43

Sidewinder, Gecko, Python, Salamander, Iguana, Cuttlefish, Octopus, Giant Clam and The Kraken.

Incidentally, I managed to solve all the screens in this game but I still can't believe it's possible to do so without losing a life.

David McGloin has written in with questions about three adventures. The stars in **Philosophers Quest** are just an indication of nearby danger and can otherwise be ignored.

In the **Eye of Zoltan** the gloves are hidden in the wizard's bedroom. You use the password in the secret passage with the keys to get out of the castle.

In **Spiderman** use the computer to start the presses.

G.B. Lambert wants to know where the orb is in **Crown Jewels**. I haven't seen the game yet, but as far

## SOS

Michael Peters would like to know how to get back to the ship once you have the treasures and how to translate the writing on the boulder in **Strange Odyssey**.

R. Henderson is having problems with Alligata's **Nightworld**. He says the instructions are very vague and that he can't find the

secret rooms and passages or replenish his energy.

Tony Haynes wants to know how to read the stone tablet on the river bed in **Staff of Law**.

Michael Beint has the same problem as me in **Five Stones of Anadon**. Where is the cross to exorcise the ghost? Can anyone help us?

as I know the orb is inside one of the waxworks. Use the matches and you should find it.

Paul Campbell has found that he can't get into the hole in the side of the chasm in **Greedy Dwarf**. Use the chain and choose the right direction.

Michael Peters can't get out of the pit or the tank in **Mystery Fun House**. Use the trampoline and give the mermaid something for her

hair and then drain the water out.

Philip Stout has some questions about **Pettigrew's Diary**. How do I get into the underground station? You can't!

What do I do with the Japanese tourists? You have to do two things. When you meet the tourist on his own you should take his map and read it.

Later on you will meet a

party of tourists. You will get some money and a camera from them if you tell them where you saw their friend.

Michael Beint has found everything except the pirate's chest in **Classic Adventure**. From the west end of the hall of mist go: S, E, S, S, S, N, E, E, NW.

Nick Southgate wants to know how to dock in **Super Agent Flint**. You don't! But if you have the suit and helmet and can insert the right disc into the computer you will be able to blast off and finish the game.

Nick also wants to know how to get past the slug in **Blue Dragon**. I managed to complete the game without finding a way past it, or into the cave, so I assume you can't do either.

Andrew Spratling can't find the time crystal in **Stranded**. Assuming you have already found the radiation suit, you should go S, E, E, S, S from the control room of the Tardis.

## HALL OF FAME

### Philosophers Quest - Stuart Kelly

The treasures: ruby, amulet, brass trophy, silver chain, ancient book, ivory tusk, gold tooth, jewelled platypus, treasure chest, filigree slipper, cheque, stuffed albatross.

Important locations: Curly passage, room full of holes, philosopher's room for contemplation, elephant's graveyard, whale's mouth, thin E-W corridor, octopus' room, sea cupboard, solicitor's office after dropping will, albatross room.

The dogs:

- Past the elephant's graveyard.
- Spot is in the bare cell past the danger room.
- Go to kennel room, get the dog and then go under the paint dropper to make it visible.

The danger room: JUMP NORTH, CRAWL NORTH, HOP SOUTH, RUN SOUTH.

The albatross: Go to the worker in the M.E. passages.

The octopus: Throw a bottle of ink.

The whale: Drop the driftwood and set fire to it by the gold tooth.

The portcullis: Rub amulet.

The mouse: Get the gorgonzola cheese if you are wearing a gas mask.

The elephant: Carry the mouse.

### Sorcerer of Claymogue Castle - Geoff Larsen

M. Tiplady has not solved as much of the game as he thinks. The answer to his problems are:

Stars are stored inside a tree in the forest.

There are two odd feelings. One as you age and one as you grow younger. The two must balance each other. The spell of Methuselah makes you grow old and the Fountain of Youth has the opposite effect. If the effect of one outweighs the other then you die and the game is over. A DRY towel wipes away the water droplets of youth.

You do not open the loft in the ballroom. The loft is reached by

casting the correct spell while standing on the fallen chandelier.

The stone door is opened by casting the seed spell.

Invisibility is the key to entering the dragon's lair.

The oak door does not need to be opened.

In response to Julian Holden and Matthew Hall's problems:

To get through the stone door you need the seed spell. To enter the castle without using the spell, enter the moat and HOLD BREATH, SWIM DOWN, SWIM DOWN, SWIM EAST.

To get the can from the battlements you must throw the firebrick. A helping hand to do this can be acquired across the lava through the stone door.

### Gremlins - Geoff Larsen

The electric drill is used to drill a hole in a metal plate which has been welded across the smashed vent in the hardware department.

The hacksaw is used to cut two pipes. One pipe is behind the bar in Dorry's tavern and the other is attached to the gas bottle.

In the pub K. and D. Harper should go behind the bar.

The mail box can be cut up into metal pipes using the welding torch, once you have coaxed Stripe, the worst of the gremlins, out of the box.

The film show at the cinema is handy for keeping the gremlins occupied while exploring the rest of the town.

Giles Harris should examine the counter to get the tape that will enable him to attach the gas bottle pipe to the whole in the metal pipe.

### Circus - Geoff Larsen

In answer to David Anderson's problems:

Repair the generator and then you can syphon out the petrol with the snorkel.

You need a bar to prise open the door when trying to get into the wagon. The bar is reached by walking across the tightrope. Some soft shoes found inside the chest will help here, and if you can't open the chest you will need to give it a good kick.

# MATHS WORKOUT

**MIKE BIBBY continues his exposé on how the Electron does its sums**

## EOR's a way to spot who's telling the Exclusive truth

IN the last article we looked at the AND and OR operations on binary numbers—logical operations, as they are known. These were simply rules for combining numbers bit by bit. We shall continue our exploration this month with a look at the EOR operation.

EOR stands for Exclusive OR—sometimes people call it XOR. Either way it's the same thing. EOR is a variant on the way we normally use the term OR.

For example, if I say: *Mike OR Pete wears glasses* this is true if Mike wears glasses, OR Pete wears glasses, OR both Mike and Pete wear glasses.

Now it's this last case of OR we're interested in, where they both wear glasses. EOR works just like OR up to this point. However, EOR does not "allow" both of them to wear glasses. Either one does, or the other, but not both.

To put it another way, the one who wears the glasses does so *exclusively*.

If both are wearing glasses then while:

*Mike OR Pete wears glasses* would be true.

*Mike EOR Pete wears glasses* would be a downright lie!

We could signify that a statement is true with the letter T, and use F for false. At school our teachers used ticks for truth and crosses for false. Since we're using computers, though, we'll use numbers: 1

will denote true and 0 will denote false. We've chosen 1 and 0 because they fit in so well with the binary system.

So, in the above example, if Mike has glasses we can give Mike the value 1. If Pete hasn't glasses we can give Pete the value 0.

Table 1 shows the idea, applied to each combination of spectacle user. The ones and zeros are known as truth values, states or conditions.

As you can see, there are four possible cases as far as Mike and Pete wearing glasses are concerned: neither can wear them as in case 1, where both Mike and Pete has 0 value. Then again, Pete may wear them {1} whereas Mike does not {0}, case 2, and so on. If you look carefully at the

numbers involved in all four cases, you see that we've got four pairs of bits we can combine.

Each pair of bits is made up of the "truth bit" for Mike and the "truth bit" for Pete.

What I've done in Table 1 is to combine these pairs for all four cases in accordance with our OR rules. We've stored the result in a third column.

We call such a table a Truth Table. In this case, it's the truth table for OR. We can use it to work out the result for any OR combination of two bits.

All we have to do is to find the row that starts with the two bit values we're combining and then look in the third

Wears glasses			
	Mike	Pete	
Case 1	0	0	neither wears glasses
Case 2	0	1	Pete wears glasses
Case 3	1	0	Mike wears glasses
Case 4	1	1	Both wear glasses

Table 1: Truth values

Mike wears glasses	Pete wears glasses	Mike OR Pete wears glasses
0	0	0
0	1	1
1	0	1
1	1	1

Table 2: OR truth table

## From Page 45

column for the result.

Table III shows a similar table for:

*Mike AND Pete wear glasses*

Again the first two columns are identical, covering all four possible cases. The third column combines them according to the AND rules.

Look again at Table II. This corresponds in a sense to our binary rule for OR: you get a 1 if either or both bits you combine contain a 1.

However if when talking about Mike and Pete you mean OR in the exclusive sense, EOR, then the combination of Mike wearing glasses and Pete also wearing glasses would have to be false.

This is because EOR means either one or the other wears glasses, but not both – it's *exclusively* one or the other.

If we do mean EOR in this exclusive sense we'd write our statement about them as:

*Mike EOR Pete wears glasses*

Its Truth table is given in Table IV:

If you look at each case, you'll see that the only time Mike EOR Pete is true is when either one or the other wears glasses, but not both (or neither).

More formally, if both bits are 0, or both bits are 1 the result is 0. If either is 1 and the other is 0 the result is 1.

To put it another way, if the bits are identical the result is 0, otherwise the result is 1.

Let's have a look at how we EOR binary pairs of numbers. It's the same as for OR and

AND – just apply the rules for EORing to each pair of bits in succession. For example:

```

10110110
EOR 11100101
gives 01010011
    
```

Take a look at what happens when you EOR a number with zero:

```

10110110
EOR 00000000
gives 10110110
    
```

that is, when you EOR a number with zero it leaves that number unchanged. Also something interesting happens when you EOR a number with itself:

```

10110110
EOR 10110110
gives 00000000
    
```

Whenever you EOR a number with itself, the result is zero. This is as it should be: remember, when you EOR two

identical bits the result is zero.

Now EOR has a property which makes it quite useful – let's look what happens when we take a number, EOR it with a second number and then go on to EOR the result once more with that second number.

```

First number 10101101
Second number EOR 10101000
Result        11000101
Second number EOR 10101000
Final result  10101101
    
```

As you can see, the first number has magically re-appeared! This always happens when you EOR twice with the same number as, in a sense, the two EORings cancel each other out.

Table V summarises the process for all four possible pairs of one-bit numbers.

As you can see, for all the cases the final resulting bit (when the first bit has been EORed twice with the second) is identical to the first bit.

Another way to think of it is that we are doing:

*first number EOR second number EOR second number*

Taking the underlined part first, we've already seen that any number EORed with itself gives a zero result. So what we're really doing is:

*first number EOR 0*

which, as we've also seen, must leave just the first number, since EORing with

zero leaves a number unchanged.

All this may seem rather abstruse, but actually it's quite useful. In fact we tend to use AND, OR and EOR quite often in graphics, particularly in animation.

To simulate movement we frequently print something on the screen, then after leaving it there for a while to register on the eye, we blank it out and print it in a new position and so on.

Sometimes we blank the character out by printing it again in the same place but in the background colour.

We can, however, use EOR. If we use EOR to place our character on the screen – never mind exactly how for the moment – when it comes to wanting rid of it, we can just repeat ourselves.

That is, we just EOR the character on again. As we've seen, the effect of two EORs is to cancel each other out. In this case, they cancel out to the original background – and the character disappears.

Don't worry too much about the details, I just want to convey the general idea.

The point is, logical operators, as AND, OR and EOR are known, can be invaluable to both the Basic and machine code programmer.

● Next time we'll continue our series with a brief look at the idea of masks.

Mike wears glasses	Pete wears glasses	Mike AND Pete wear glasses
0	0	0
0	1	0
1	0	0
1	1	1

# Find and replace that string

WHEN writing fairly long programs I often find that I'm not sure whether I've used a certain variable name before, or of the exact whereabouts of a particular procedure.

I also use very long variable names for the sake of clarity, which occasionally cause the dreaded No Room error.

For these reasons I wrote Find and Replace – which is really two programs rolled into one.

The first part, Find, will go through an entire Basic program highlighting any occurrences of the string being searched for.

The second part, Replace, replaces any occurrences of the search string with another string.

When called, Find and Replace prompts you with the question *FIND?* to which you enter the string you are looking for. You are then prompted with *REPLACE?*

If you press Return at this point, Find and Replace will begin to search through the program without replacing anything. If, instead of pressing Return, you enter a string you are then prompted with the question *GLOBAL?*

If you answer yes to this, Find and Replace goes ahead and automatically changes every occurrence of the search string with the replace string. Otherwise each occurrence will be highlighted in turn and the computer will wait for you to type Y or N for whether or not you want to replace.

The way it works is really

**Ever tried to find a particular string in a long, long listing? With this search utility by ROBIN NIXON your micro will do the chore for you**

quite simple, although you coding is a little tricky. As you may know, in BBC Basic each program line is stored in a tokenised form.

This means that keywords such as FOR, NEXT and THEN each have a corresponding single character which is substituted for the keyword itself. This is done to make program execution easier and faster and to enable longer programs to be typed in.

Because the lines are tokenised it is not possible to compare a search string with sections of a program line because they are not in the same format. So immediately after you enter search or replace strings the utility tokenises them so that they are of the same format.

Next, the program takes each line in turn and checks whether or not the search string is contained in it – in much the same way as INSTR works. If so it records the number of times and where the matches occur.

Having done that, if you have not selected the Replace option each occurrence is highlighted while the program waits for a key press. This continues until the end of the program is reached or you

press Escape.

If you have selected the Replace option the line is copied, bit by bit, into a buffer at &700 with each search string being substituted where required by a replace string.

The new line now held in &700 – which is the keyboard input buffer – is then entered into your program as if it had been typed in at the keyboard.

As it stands Find and Replace tucks itself in just under HIMEM in Mode 8. Therefore if you later change mode it will be wiped out. This is fine if you only need temporary use of the utility.

But if your Electron is cassette-based and you wish to keep Find and Replace resident in memory, the simplest thing to do would be to set PAGE to &1200 and then load Find and Replace by typing:

**PAGE=&1200  
LOAD "FINDREP"**

assuming of course, that it has previously been saved as FINDREP. Then change the value of START in line 210 to &E00 and run the program.

If you have a disc-based Electron and want to keep the utility resident in memory –

and don't mind losing use of the function keys – just change START to &900 and run the program.

In each of these cases the object code will be saved either to tape or disc as FR.

Whenever you need to use Find and Replace in the future \*LOAD FR and, depending on the value START was set to when FR was assembled, type one of the following:

**CALL &900  
CALL &E00  
CALL &5000**

&900 is for disc users only, &E00 is if you wish to keep Find and Replace resident in memory and &5000 is the default if you don't change the listing.

When using this utility always ensure that you have saved the program you are working on as you may accidentally change something you don't wish to.

For example, if you changed all occurrences of IF to : you could not then change all occurrences of : to IF and still have a working program – you would then have no statement separators.

Also, if you have a fairly long line and start replacing small chunks of it with larger ones, it may end up longer than the maximum 255 characters allowed. In this case your line will finish up being garbled.

**Full listing starts  
on Page 48**

## Educational Computing on the Electron

**9 FULL LENGTH programs**  
designed to stimulate, educate  
and entertain - both  
school and at home

The Micro User Education Special  
Volume 1 has now sold out But  
Volume 2 is still available

It contains nine full length  
programs written to the highest  
standards and each picked to  
combine educational worth with  
sheer enjoyment. The nine  
programs cover topics from early  
reading and simple sums to the  
rules of punctuation and angle  
estimation - and there's an  
excellent introductory database.

The magazine contains the  
complete listings of all the  
programs together with advice on  
how they can be adapted to cater  
for individual needs.

**Fun Factors:** Arcade style factor  
learning. **Windmill:** Word, number  
and colour recognition. **Angler:**  
Angle estimation fun. **Spelldroid:**  
Learn to spell with our friendly  
robot. **Tortal:** Teach and test the  
rules of simple addition.  
**Discovery:** A strategy based  
phrase identification game.  
**Punctuation:** Test and teach the  
rules of punctuation. **Junior  
Database:** A comprehensive  
database for the young learner.  
**Chinese Takeaway:** Teach and  
test the rules of simple  
subtraction.

Education Special Volume 2	
Magazine	£1.50

# MAKE IT A RED—OR BLUE, OR YELLOW— LETTER DAY

**TREVOR ROBERTS**  
starts a new series  
on Electron graphics

**FOR a micro that's supposed to have 16 colours, the Electron's screen display is fairly drab when you switch on.**

All you get when you type at the keyboard is white letters appearing on a black background.

Now inspired by the knowledge that although the Electron is in Mode 6 when you switch on there are several other modes available, you might want to try exploring these.

To change mode—and we'll deal with what that actually means later—you just type in MODE followed by the mode number you require and press Return.

There are seven different modes in all, ranging from Mode 0 to Mode 6 (the default mode). So by entering:

## MODE 0

through to:

## MODE 6

in turn we can explore each of their characteristics.

Again, it's a bit disappointing for those who want a bit of colour in their computing life. Although the appearance of the letters you type in and the number of characters per line and lines to a screen differ with each mode, the colours stay obstinately black and white. Or to be precise, white letters on a black background.

Figure 1 sums up the changes you can expect as you

travel from mode to mode.

As you can see from the text column of Figure 1, the number of lines of text you can display from top to bottom of the screen varies from mode to mode.

In Mode 1 there are 32 lines while in Mode 3 there are 25. In Mode 0 you can have a massive 80 characters on a line while in Modes 2 and 5 you can only have 20.

Now the second column of Figure 1 seems to indicate that some of the modes can have more than one colour. We're told that Modes 1 and 5 have four colours, while Mode 2 has sixteen. But if that's so, why, when we entered Mode 5 with:

## MODE 5

did the letters appear in only black and white? What of the other two colours?

The answer is that the other two colours are there and

ready to be used, but we haven't told the Electron we want to use them. Until we do, we are stuck with the colours established by the default condition.

You probably understand what is meant by a default condition. If you don't, don't worry, because you meet them all the time.

When you switch on your Electron or press Break, the micro starts up in Mode 6 (25 lines, each capable of holding 40 characters).

It has to start up in one mode or another, and the mode that is chosen is Mode 6. If you want another mode you have to use a MODE command to get to it.

Hence the term default condition, it's the mode you get by default. If you want another you have to tell the micro.

It's the same with the colours available when you

enter a mode.

If you think about it, you only really need two, a foreground colour for the text and a background colour.

And the default colours picked by Acorn are black and white. The letters are white and the background black. These are the defaults.

If you want another pair of colours, such as black letters on a white background, or red letters on a yellow background, then you have to do something about it.

You have to change the default conditions so you get the shades of text and background that you want. And you do this using the COLOUR command.

Let's concentrate on Mode 5, which Figure 1 promises us has four colours and 32 lines of 20 rather chunky characters. Put the Electron into Mode 5 by entering:

## MODE 5

and pressing Return.

As usual, the text is white on a black background. Now try entering:

## COLOUR 1

and see what happens. Unless your Electron is very different from mine you should see that the prompt —>— is now red rather than white. Now try typing a few letters such as:

**PRINT "It's a red letter day"**

and you'll see now that the foreground or text colour is red.

So, when you're in Mode 5 the command COLOUR 1 ensures that any letters that appear on screen after the command are red. Now try the command:

## COLOUR 2

and you'll see that the prompt on the next line is yellow. Further keyboard athletics should convince you that now the text colour is yellow.

A quick:

## COLOUR 3

returns the Electron to producing white text on a black background.

The result of all this is that

Mode	Number of colours	Text		Memory used
		lines	char	
0	2	32	80	20k
1	4	32	40	20k
2	16	32	20	20k
3	2	25	80	16k
4	2	32	40	10k
5	4	32	20	10k
6	2	25	40	6k

Figure 1: Electron modes

## From Page 51

now, unless you've cleared the screen or you've been so verbose that it's scrolled to make room for more text, you should have four colours on screen. They are white, red, yellow and black.

Lose one mark if you forgot about black. That's counted as a colour, even though it's a background colour. In fact you can get black text as you'll see — or rather not see — if you use:

### COLOUR 0

The problem is that the black text merges into the black background, so you can't see what you're typing. Not a good idea!

The easy way out of this is to hit the Break key, which returns you to the default set-up, white text on a black background.

The drawback is that you're now in Mode 6, not Mode 5. Still:

### MODE 5

will remedy that.

Now that we've seen how to change the foreground or text colours you might want to have a go at changing the background too.

This is easy if you remember the numbers you used with COLOUR to alter the foreground. All you do is add 128 to these numbers and the background turns to that colour.

So assuming that you're back in Mode 5 in the default black and white, try:

### COLOUR 129

The result is that you should

see a white prompt appear on small patch of red background. The new background colour is red and any letter printed on the screen will appear against a small patch of red. If you want the whole background to go to red just use CLS to clear the screen. Spectacular isn't it?

To get a yellow background you just use:

### COLOUR 130

as 130 is 128+2. To get a white background:

### COLOUR 131

is the command. However this isn't too bright an idea, as now you can't see the white letters against the white background.

Again, if you can't type in

should do the trick, while:

### COLOUR 1:COLOUR 130:CLS

will provide red letters on a yellow background.

So we've four colours available in Mode 5 and the promise of Figure 1 has been fulfilled.

The colours are selected with a COLOUR command, each colour having a reference number.

Black is colour 0, red is 1, yellow is 2 and white is 3. Adding 128 to the number allows us to alter the background.

It seems simple and straightforward, and so it is. However there is more to the COLOUR command than meets the eye. The numbers

Can you get these colours? The answer is yes.

You can think of our familiar logical colour numbers as codes standing for colours.

When you enter Mode 5 the code number 0 stands for black, while 2 means yellow. Now this selection is one of the Electron's default conditions.

Although it's like that when you enter the mode it needn't be like that all the time. If you want, you could have code 0 referring to blue and code 3 referring to magenta, so:

### COLOUR 0

would result in blue letters, while:

### COLOUR 3

would give magenta text.

How we actually do that we'll leave to next time. The point to grasp is that the logical colours can be filled with other shades than the ones allocated by the Electron.

If you wished they could all be flashing yellow-blue, though that would be a bit silly.

If you have difficulty with the concept, just think of the logical colour numbers as being paint pots. When you enter Mode 5 you've got four of these paint pots numbered 0 to 3 that just happen to be filled with black, white, red and yellow paint.

You can change the paint in these pots if you want different colours, but you're only allowed four pots at one time.

Figure 11 shows the four logical colours with their default colours, along with some of the colours that could actually be used.

For the moment, however, stick with the default colours allocated to the four logical colours we're given in Mode 5.

Try out different combinations of foreground and background colours until the COLOUR command gets to be second nature.

Next time we'll look at how to fill those pots with different paints — or, if you want to be formal, assign non-default actual colours to the logical colours.

We'll also look at some of the modes other than Mode 5.

commands that you can't see, the Break key should help.

As you've probably guessed, the command COLOUR 128 has the black background re-emerging.

With this mastery of the colour command in Mode 5 we can now get the foreground/background combinations we wished for earlier.

For black letters on a white background:

### COLOUR 8:COLOUR 131:CLS

that we use to refer to the colours in our COLOUR commands are known as logical colour numbers.

So far the logical colour number 0 has referred to black, the logical colour number 1 has meant red and so on.

When you think about it, this is a bit limited. What if you wanted green or blue letters on a background of magenta, cyan or even on flashing blue-yellow?

		Flashing

# Micro Messages

I CANNOT get double height characters on my Electron.

I know that for the BBC Micro you only have to type in PRINT CHR\$(141) "Hello" and you get double height straight away.

So I would like to know how it is done in the easiest possible way. — **Girbinder Singh, Nottingham.**

Below is a program that will print double height characters in any mode.

Set the colour with COLOUR and the position with TAB.

```
10MODE 7
20PRINT
30PROCbio("Electron User
")
40GOTO 40

```

## Connecting joysticks

I HAVE an Electron and several MicroPower programs, Gorilla, Bandits at 3 o'clock, Croaker.

I wish to connect joysticks, but would also like to use the Plus 1 interface for printer and ROMs.

Is this compatible or will I have to buy a Plus 1 and also another joystick interface such as the First Byte one? Maybe

## The way to make a big impression

there is another printer/joystick interface that is more suitable? — **A.D. Butcher, Romsey.**

● The Plus 1 is all that you require. Any analogue joysticks can be used with this.

Joyplus in the April 1985 issue of *Electron User* will convert nearly all of the early Micro Power games to work with the Plus 1 and analogue joysticks.

## Cartridges for Plus 1

LAST summer I bought a Plus 1 unit for my Electron. At the same time I bought a pair of joysticks and the Hopper ROM cartridge.

I am still very pleased with my Plus 1 but the only problem is that other than Snapper and Countdown to Doom, I have not seen any other cartridges suitable for the Plus 1.

Is this because there aren't any or am I missing out on something?

If so could you please inform me what is available. — **Stuart Robinson, London.**

● There are quite a few ROM cartridges available for the Electron.

Acornsoft have produced Lisp, Logo, Pascal, View and Viewsheet.

ACP's ROM adaptors can be used to plug ROMs into the Plus 1 cartridge sockets. This means that you can make up your own ROM cartridges.

## Micro magic

HAVING read yet another article about David Hambly and micro magic, I feel moved to correct your statements.

As far as I am aware I was

using a BBC B in my close-up magic act in 1983. This led to my programming the Paul Daniels Magic Show for Acornsoft, which has been on the market since last January for both BBC and Electron.

It contains 10 magical (rather than mathematics dressed up as magic) tricks. One even fooled Paul Daniels himself!

The pack is difficult to find, owing to Acornsoft's unerring way of advertising a product before Christmas but releasing it after the event. But I believe it's by far the best pack on the market, being programmed by a skilled programmer (I wrote most of the Acornsoft adventures) who is also a semi-professional magician.

Incidentally, I note that my *Philosopher's Quest* is No. 2 in your Top Ten adventures, for which many thanks. Acornsoft never told the public of the Electron versions, alas, also in true Acornsoft style. — **Peter D. Killworth, Oxford.**

## View printer driver

IN the December issue of *Electron User* you asked whether anyone had used a View printer driver with the Electron. I have been using one for a while.

My setup is Electron, Plus 1, Plus 3, View and Epson LX-80 printer. I have sometimes used an FX-80 printer.

The printer driver from Watford for the FX-80 printer and BBC computer works perfectly well with the Electron, although it is a bit awkward at the start.

The printer driver I am using just now is one for the MX-80 and works perfectly.

If you can, get a tape

version of the printer driver, otherwise you will have to know someone with a BBC running View to transfer your driver to tape. — **David Climie, Glasgow.**

## Plus 3 software

PLEASE would someone tell me how I can get my hands on some decent software for the Plus 3? I have just bought a Plus 3 but I can't find anyone that sells Electron software on disc.

Is this because software houses can't be bothered to transfer their programs to disc or isn't it possible?

Also Robert Sloan (December *Micro Messages*) doesn't need to use "JOY on Ghouls. Just use the built in joystick option when the first part has loaded. — **Andrew Dix, Ipswich.**

● Don't throw your tape software away. Sloggers T2P3 ROM will transfer most of your tape software to Plus 3 disc — protecting it at the same time.

As the number of Electron users with discs increases, so will the amount of software on disc.

## Way out of the galaxy

WE have an Electron with Elite on cassette.

Despite having over 100,000 credits and an intergalactic hyperdrive, it is not possible to progress beyond Galaxy 1 following the instructions provided.

Could you please offer any

## From Page 53

suggestions of how we may progress onto other galaxies? — **Mike Fleadrian, Gloucester.**

● Your problem arises from the fact that early versions of Elite have a bug.

If you look at Micro Messages for June 1985 in the *Electron User* you will find a way around this.

It also might be worth contacting Acornsoft to see if they will replace your copy.

## Way into the dock

I'M having problems with Elite — I just can't dock.

It takes me half an hour to get the entrance port on the screen and then another quarter of an hour to get it any where near the proper position to dock! Can anyone help?

I am a first time adventurer. Can anyone recommend a reasonably priced, descriptive adventure game with a good vocabulary. My favourite games are Repton, Elite and Hopper. — **Ian Wright, aged 9, Chester.**

● You should find Sphinx Adventure is what you are looking for.

Our sister magazine *The Micro User*, featured an Elite player's guide in its January edition that should answer all your problems.

## All the facts on \*FX

IS there any way I can find out comprehensive information about the \*FX codes, as the *User Guide* only glances over them? I am sure this is only the

tip of the iceberg. For example \*FX200,2 clears memory when Break is pressed. — **F. Lawler, Radlett.**

● The *Electron Advanced User Guide* provides a list of all the available \*FX calls.

John Woollard's series on \*FX calls covers them in more detail. This started in the July 1985 issue.

John Woollard's series on \*FX calls covers them in more detail. This started in the July 1985 issue.

tip of the iceberg. For example \*FX200,2 clears memory when Break is pressed. — **F. Lawler, Radlett.**

John Woollard's series on \*FX calls covers them in more detail. This started in the July 1985 issue.

## Show generosity

I BOUGHT a switched joystick and interface at the *Electron & BBC Micro Show* from Vulcan Electronics.

I then went around looking at various exhibits, but after I left and was walking back towards the Underground I noticed that I was only carrying one bag when I should have had two.

I ran back to the hall and went around asking the various officials if anyone had handed in a bag. None knew of anything being handed in. I then went back to the Vulcan stand to see if anyone had handed the bag into them as it had their logo on the side.

They said it hadn't been handed in but the guy on the stand said that he would take

tear yourself away from your *Electron* keyboard and drop us a line. And please, if you want a reply, enclose an SAE. The address is:

**Micro Messages  
Electron User  
Europa House  
68 Chester Road  
Hazel Grove  
Stockport SK7 5NY.**

the loss as theirs and handed me another joystick and interface.

So I am writing to say a public thank you to Vulcan Electronics, as I am very grateful for their generous action.

Also I would like to say thank you to Database for organising such a show where I could buy cut price hardware and software for my *Electron*.

I prefer the longer programs in the *Electron User* as they are well worth typing in. — **P. Johnson, Whitstable.**

● Thanks for the praise, and well done Vulcan. We've always believed our shows to be the most user friendly, and your experience proves it.

Our next show is at the New Horticultural Hall, Westminster, May 8 to 11.

## Plus 3 and discs

I AM buying a Plus 3 expansion unit and I read in your magazine that the Plus-3 has an 80 track disc drive. But there are 40 and 80 track 3.5in blank discs.

Will the Plus 3 use both types of blank discs, when formatted?

If not, will it take Hewlett

Peckard 3.5in single or double sided blank discs, when formatted? — **Jamieson Kirkhope, Wokingham.**

● The Plus 3 will format the disc 80 tracks, single sided using its own formatter.

It will not be able to read discs that have a different format to the ADFS, unfortunately.

## Basic modes

I HAVE found a way of putting the Acorn *Electron Basic* sign into different modes.

All you have to do to put it into Mode 0 is type in:

\*F1 255,107

then press Break. To put it into Mode 1 type in:

\*F1 255,108

then press Break, and so on. — **Darren Butler, age 13, Brentwood.**

## Software for handicapped

WE have recently obtained a grant to produce computer software for mentally handicapped people which will be the subject of a three-year project at the University of Keele.

We have just finished our first two pieces of software including the first ever computer arcade game aimed at mentally handicapped people, Mr Ugh.

We would be very interested to hear from anyone who has a similar interest or who would like to receive a copy of our free bulletin which is produced at regular intervals. — **Rob Collins and John Hegarty, University of Keele, Keele, Staffordshire ST5 5GB.**

## Colour galore

AFTER having read thoroughly my copy of *Electron User* I have seen in *Micro Messages* a young gentleman asking

## Best buys in disc drives

THANK you for producing such excellent games. During the last couple of months they have picked up tremendously.

Games like *Dungeon Quest*, *Skramble*, *Tex 'N' Dan* and most of all a superb martial arts called *Karate Warrior* — great stuff, please keep it up.

Please include more music

programs as I like music on the *Electron*, especially short easy to write out programs.

I am thinking of getting a Cumana disc drive. Could you please tell me if the disc interface comes with the drive itself — **Nick Southgate, Uppminster.**

● You'll have to buy a separate

interface when you get a Cumana disc drive. Unfortunately they don't come in a single package as standard.

Make sure the drive has its own power supply as it can't be run off the *Electron*'s supply.

As for music programs, watch out for future issues.

how to get more than his quota of colour.

Although your short program gave a reasonable demo of "more colour", please give my program a try:

```
10C=4:MODE 2
20REPEAT
30BCOL C,I
40C=C+1
50MOVE 0,0
60MOVE 0,1024
70PLOT 85,640,512
80PLOT 85,1280,1024
90PLOT 85,1280,0
100MOVE 640,512
110PLOT 85,0,0
120UNTIL FALSE
```

This may prove addictive viewing, as it does for my two small sons.

You should leave it running for about five minutes. — Karl Obrien, Abram, Lancs.

## Where's Frak?

I WAS wondering if there is an Electron version of Ardvark's Frak. I have been to all of the good computer stores but half of them have never heard of the game.

So please could you put me out of my misery and tell me if there is one? — Derek Irving, 12, Glasgow.

PS. Manic Mole is the best game that's ever been printed in a magazine. Keep up the good work!

● The day we received your letter we learnt of Frak's Electron debut!

## Choice of ROM box

I OWN an Electron with Plus 1 and Plus 3. I am now considering buying a ROM box.

However I do not think I will ever need all the ROM sockets offered by the Slogger ROMbox. I was therefore thinking of buying the Advanced ROM Adaptor offered by ACP.

Will the ROM software offered by Slogger work with this product? — Stuart Murdoch, Edinburgh.

● ACP's ROM adaptor

I'M glad to see that Electron User has moved a little up market. Early issues tended to be a bit "comical", but recent articles and programs have shown your awareness that us tyros are becoming more discriminating.

Micro Messages is my favourite section, but I am surprised at the number of youngsters looking for ways to cheat at games.

Perhaps I should declare that I'm pushing 40 with two young children, and I certainly will not allow them to cheat.

After all, there is no sense of achievement unless you actually play the game to a

conclusion — even if you don't beat the current high score.

In a recent issue a young lady, namely Helen Williams, bemoaned the lack of Electron software in Gloucester shops.

This seems to come and go. Boots had quite a stock a few weeks ago, as did W.H. Smith.

Smiths seem to have lost interest recently, but there are still some good programs left in Boots.

She also liked typing in programs from the magazine. This is where I get most

pleasure from the machine, and in fact have yet to find one that fails to work.

This brings me to another point. There seems to be a lack of perseverance from some of your readers.

Complaints that programs do not work are in every case the result of insufficient care taken at the typing stage.

Come on out there, think about what you're doing and read the User Guide — it's there to help! — John Jamieson, Abbeydale, Gloucester.

provides a single ROM socket. Any ROM can be plugged into the adaptor, then plugged into the Plus 1.

All Electron ROMs work in either Slogger's ROMbox or ACP's adaptor.

See Micro Messages, January 1986, for a list of ROMs that work on the Electron.

## Transferring software

AFTER reading your review of the Cumana Disc Interface I rushed out and bought it, and I can thoroughly recommend it.

It makes such a difference saving and loading at such speed.

However, there is one question I'd like to ask you. Where can I obtain disc versions of commercial software, or how do I transfer my cassette originals to disc?

I know you are going to give us the never-ending statements about copyright, but surely if someone has a cassette original they should be allowed to transfer it to disc? — Terry Newman, Norwich.

● As yet there is very little software on disc for the Electron. However, Slogger has a ROM which will transfer your software on tape to Cumana disc for you.

## Non-starter

COULD you please tell me if it would be possible to use the motor racing game Revs on the Electron using the new Tube interface and a second processor?

If so could I use other BBC games on the Electron?

My final question is are there any alien items in Elite and if so which galaxy are they in? — David Ramsden, 13, Dewsbury.

● Revs is not available for the Electron and the BBC version will not work even with a second processor attached.

We don't think there are any alien items in the Electron version of Elite. Has anyone found any?

## Quality games

WHO are these people who keep trying to tell us the Electron is dying? I would like to get my hands on them and shake the truth into them.

The people who say that software is of poor quality ought to look at games such as Magic Mushrooms, Repton I or II, Deathstar, Beach Head, Guardian, Zelaga, Mineshaft, Tempest, Hampstead and Terrormolinos to name but a few.

Also in regard to Dare Devil Denis and S. Whigham's letter in the December issue, it is possible to get past the policeman and the tree although it is very difficult.

I have only managed it once. To do so ride up to the policeman and jump between him and the tree. Split second timing is required.

It is good to see that the add-ons range has increased with new support coming from ACP as well as increased support from Pace who have brought us that marvellous comms package. — D.P. Cumbers, St Ives, Cambs.

## Killer stick

I TOOK advantage of your Beach Head offer in October's issue and the game has certainly lived up to my expectations — superb graphics, stunning sound and very hard to beat.

However, I have knocked out the fortress of Kuhn-Lin several times, making a best score of 109,600.

I can also recommend Tarzan Boy by Alligata. I can almost get on to the third screen but I keep getting killed by the walking stick type object that moves up and down the right hand side of the screen. Has anyone got past it? — Steven Talbott, Swasey, Cambs.

# Now YOU- and your Electron - can enter the exciting, ever-changing world of telecomputing!

APPROVED for use  
with telecommunication systems  
run by British Telecommunications  
in accordance with the conditions  
in the instructions for use.

The fastest growing, most exciting field of micro-computing is communications. Just one phone call away there's a vast range of fascinating electronic information and services such as:

★ **MicroLink:** A specialised service on Telecom Gold, Britain's leading carrier of electronic mail. MicroLink gives you your own private letter box, the ability to send and receive telex messages, to send telexmessages for next-day delivery to any address in the UK or USA, ready access to up-to-the-minute computer news, a large range of mainframe services and much, much more.

★ **Prestel/Micronet:** More than 300,000 pages of information, electronic magazines and special interest clubs, with news, advice and reviews. And there's a wealth of software just waiting to be downloaded directly into your Electron.

★ **Bulletin Boards:** News, views, software and specialist help - they're all available on the scores of home-brewed electronic notice boards that are springing up all over the country.

This *Electron User* communications package includes the Pace Nightingale modem, RS423 interface and Tellstar software, FREE registration to MicroLink (worth £5), FREE quarter's subscription to Micronet (worth £10), and your chance to win a fabulous holiday in New York! (The Plus 1 is not included.)

For many months we at *Electron User* have been looking for a communications package sophisticated enough to meet our exacting requirements.

Now at last it's here - the Tellstar/Nightingale combination.

The Pace Nightingale is a tried and tested, fully BT approved, multi-baud modem that plugs into a standard telephone socket.

Telstar complements it perfectly. It allows easy access to all the major electronic information providers, including MicroLink and Prestel, and while not available in full colour it contains all the other features expected of advanced communications software.

And of course, the package includes the necessary serial interface to link directly with your Electron via your Plus 1.

**Now there's nothing to stop you playing your part in the communications revolution - dial up, log on and have fun!**

Normal retail price: £160.95 (incl. VAT)

**Electron User  
special price:**

**£145** (SAVE £15.94)

including VAT, postage & packing

**TO ORDER, PLEASE USE THE FORM ON PAGE 61**

If you want to start doing more with your micro than just playing games, this package is your ideal introduction to the four most popular applications for professional computers. All the programs have been designed for simplicity, so even a child can use them. Yet they include advanced features not yet available on programs costing many times as much!

**Finalist for the Home Software  
of the Year Award**

**Contains 32 page booklet giving clear,  
easy-to-follow instructions on all 4 programs**

**Word Processor:** Ideal for writing letters and reports. There is a constant display of both time and word count, plus a words-per-minute display to encourage the budding typist! A unique feature is the double-size text option in both edit and printer mode – perfect for young children and people with poor vision.

**Database:** You use this for storing information, just like an office filing cabinet. Facts you have entered can be quickly retrieved by just keying in a word or part of a word. They can be sorted, replaced, saved for future use or printed out.

**Spreadsheet:** Enables you to use your micro for home accounts or pocket money records. It creates a display of numbers in rows and columns. Continuous updating is possible, and a changed figure can be instantly reflected throughout the rest of the spreadsheet. Your results can be saved, to be used for future updates, or can be fed into its associated program.

**Graphics:** Part of the spreadsheet section, it lets you draw bar charts, pie charts and histograms to give a graphic presentation of your statistics. Helps to give life and colour to the duller figures!

☆ Word Processor ☆ Spreadsheet  
☆ Database ☆ Graphics

**Now they're  
all together -  
in ONE simple  
package**

Four full-scale  
programs for  
an incredible  
low, low price! **£5.95**  
cassette

Also available from:

## On the March 1986 tape:

**GRAND PRIX** Exciting race game  
**DIGER** A clever test of strategy  
**MARCHING ORDER** Counting and  
ordering numbers. **FIND AND  
REPLACE** Useful editing program.  
**SECTOR EDITOR** Excellent disc  
utility. **TIMEPIECE** Superior graphics  
demonstration. **OKO** Game of  
cunning. **THIRING** A cycle of  
triangles.

## On the February 1986 tape:

**NECROMANCER** Superb test  
adventure. **GREIBIT** Arcade action.  
**BACKUP** Disc utility.  
**MACHINE CODE** Help to write an  
arcade game. **TAPEIDISC** More  
software transferring techniques.  
**SIDWAYS** RAM. Example  
program.

## On the January 1986 tape:

**FRUIT WORM** An arcade classic.  
**HELICOPTER RESCUE** Pilot an air  
sea rescue helicopter. **MACHINE  
CODE** Detect collisions between  
sprites. **TAPEIDISC** Transfer your  
software to disc. **MODE012**  
Multi-Mode screens.

## On the December 1985 tape:

**GET SET SANTA** Christmas fun  
collecting presents. **MISSILE  
TITILLATE** Save your cities.  
**PROGRAM PROBE** Using joystick  
**SPACE COUNT** Counting for  
youngsters. **CHRISTMAS CARD**  
Cards and cards for all. **DISC  
MENU** Disc Menu creator.

## On the November 1985 tape:

**KARATE WARRIOR** Electrifying  
combat. **ULA Mode 6** Mode 71  
**PAINT ROLLER** Colourful arcade  
action. **DEFUSE** Defuse the bombs.  
**SPRITE PRINT** Machine code  
graphics utility. **TRAIN** Far from  
stationary graphics.

## On the October 1985 tape:

**DUNGEON QUEST** An amazing all  
arcade adventure. **PILOT**  
Computer assisted learning language.  
**RAVING ROLLER** Arcade action in  
the garden. **TRAIN** Animated action  
game. **KALEIDOSCOPE** Colourful graphics  
action.

## On the September 1985 tape:

**TEKMAN** 3D Wild West shoot-out.  
**PINTCURSOR** Machine code  
graphics. **SPRITE-ED** Sprite editor.  
**COMPOSE** Writing simple amplified  
**REVERSI** Cunning strategy game.  
**SIMPLEFIRE** Save and read data  
**BOUNCE BALL** Two player action.  
**ROTATE** Animation in a spin.

## On the August 1985 tape:

**DIGGA** Exciting arcade action  
beneath the earth. **DOODGE THE  
ASTEROIDS** Fun deep in space  
among the asteroids. **MICRODE  
GRAPHICS** Sliding grid of letters!  
\*FX The OS explored. **MOVEIT** An  
intriguing sliding puzzle. **HEXGRAM**  
An educational game to increase  
your word power.

## On the July 1985 tape:

**MANIC MOLE** Machine code action  
at its best. **HIGHER OR LOWER**  
Guess the card. **TIM BOMB**  
Carefully calculate TNT. **MICRODE  
GRAPHICS** Two demonstrations.  
**FX1/2** The OS on call. **PIRATE  
MATHS** Sum fun. **NOTEBOOK**  
Password Generator.

## On the June 1985 tape:

**QUASIMODO** Baffling classic  
disassembler. **HELIX** Machine  
code utility. **ACTIVITIES** Educational fun.  
**REFLECT** Aggressive aliens.  
**ENGINE** Animation demo. Race  
track action. **STRINGALONG**  
Scrolling fun. **CASTLE** Medieval  
graphics. **MATHS CURVE** Angles  
and arc. **NOTEBOOK** Trivia.

## On the May 1985 tape:

**SRAMBLE!** Compulsive arcade  
action. **SHEEPNIM** The logic game.

## TEXTWRITER Screen utility. LIFE

A cultured classic. **CEDRIC**  
Educational fun. **THREE-D**  
Outstanding utility. **SPOKES**  
Fascinating graphics. **MONORBIT**  
Heavenly displays. **BLAZON** Portable  
devices. **FLOWERS** A Basic  
bouquet. **NOTEBOOK** Annotated  
annotation.

## On the April 1985 tape:

**SUPER ARCHER** Target practice.  
**BINARY SEARCH** Search data  
efficiently. **JOYFULS** Smashed  
joyful routine. **ODD ONE OUT**  
Educational fun. **POLYGONS** 3D  
rotation. **MONEY CRAZY** Arcade  
action. **STARCHART** The night sky.  
**FORTUNE TELLER** Horoscope.  
**COLLISION DETECTION** Alien  
encounters. **MILO** Guessing game.  
**NOTEBOOK** Hello to assembler.

## On the March 1985 tape:

**MR. FREEZE** Ice cube arcade  
action. **SCREENDUMP** Two  
procedures for printer dumps.  
**FILLER** The machine code fill  
routine. **FRED'S WORD GAME**  
Educational fun. **BIG LETTERS**  
Large text utility. **PERCY** Beat the  
burning bus. **ANIMATION** Two  
example programs. **PIGS** Fying  
bacter. **NOTEBOOK** Display  
formatting.

## On the February 1985 tape:

**CHAAL** A maddening maze  
adventure. **BOUNCY** Addictively  
amusing action. **PAIRS** Can you  
remember the cards? **BASE** A  
Binary/hexadecimal conversion utility.  
**CATCHER** Collect the eggs before  
they break. **CLOCK** Time keeping  
utility. **RACER** Grand Prix action.  
**NOTEBOOK** Graphics window.  
**TRIG** All the right angles.

## On the January 1985 tape:

**SPACE BATTLE** Destroy the deadly  
descending aliens! **NEW YEAR** A  
leisure and graphics greeting.  
**ESCAPE FROM SCARGOV**  
Maze-fied action. **PIE CHART**  
Statistics made simple.  
**CLAYPIGION** An Election  
brochure. **ORGAN** Music maestro  
presses! **NOTEBOOK** An original  
program. **RANDOM NUMBERS** Or  
not so random! **SNAKES** Reptilian  
arcade action. **CHEESE** Race Beat  
rival race.

## On the December 1984 tape:

**CHRISTMAS BOX** Assign the  
presents logically. **BILLY SANTA**  
Sort out the middle. **SNAP** Match  
the Xmas pictures. **RECOVERY** The  
Bad Program message termed.  
**CAROL** Interactive driven music.  
**AUTODATA** A program that grows  
and grows. **NOTEBOOK** Simple  
string handling.

## On the November 1984 tape:

**STAR FIGHTER** Alien  
missions. **SCROLLER** Wrap around  
machine code. **URBAN SPRAWL**  
Environmental action game. **SPELL**  
Alphabetic education. **JUMPER**  
Level headed action. **CAESAR** Code  
breaking broken. **KEYBOARD**  
Typing games.

## On the October 1984 tape:

**BREAKFIRE** Classic arcade action  
alphaswap & logic game to  
strain your brain. **SOUND  
GENERATOR** Tune the Electron's  
sound channels. **MULTICHARACTER  
GENERATOR** Complex characters  
made simple. **RIGEL** 8 Out of 10  
new graphics. **MAYDAY** Help with  
your mouse code. **NOTEBOOK**  
Palindromes and string handling.

## On the September 1984 tape:

**HAUNTED HOUSE** Arcade action  
in the spirit world. **SPLASH** A logic

game for non-swimmers. **SORT  
SHOWS** How sorting algorithms  
work. **SORT TIME** The time they  
take. **CLASSROOM INVADERS**  
Multicoloured characters go to  
school. **SAILOR** Naval code.  
**MATHS TEST** Try out your mental  
powers.

## On the August 1984 tape:

**SANDCASTLE** The Electron seaside  
outing. **KNOCKOUT** Bouncing balls  
batter brick walls. **PARACHUTE**  
Keep the skydivers true. **LETTERS**  
Large letters for your screen.  
**SUPER-SPELL** Test your spelling  
on your BIKI. Final power  
comes to you. **Electron SCROLLER**  
Slid strings slide sideways.

## On the July 1984 tape:

**GOLF** A day on the links with your  
Electron. **SOLITAIRE** The classic  
sol logic game. **TALL LETTERS**  
Large characters made simple.  
**BANK ACCOUNT** Keep track of  
your money. **CHARTIST** 30 graphs  
**FORMULAE** Arcade, virtues and  
angles.

## On the June 1984 tape:

**MONEY MAZE** Avoid the ghosts to  
get the cash. **CODE BREAKER** A  
maddening is needed to crack the  
code. **ALIEN** See little green men  
the Electron way. **SETUP** Colour  
commands without fears.  
**CRITICALS** Beautiful graphics.  
**LASER SHOOT OUT** A  
metaphorical shooting gallery.  
**SMILER** Have a nice day!

## On the May 1984 tape:

**RALLY DRIVER** High speed car  
control. **SPACE PODS** More aliens.  
**ASTERIOD** Space action. **SECRET**  
messages made simple. **FRUIT  
MACHINE** Spin the wheels to win  
chocolates. **AVOID** Avoid the opponent  
to survive. **TIC-TAC-TOE** Electron  
thoughts and crosses. **ELECTRON**  
**DRAGSTAMPS** Create and save  
Electron masterpieces.

## On the April 1984 tape:

**SPACEHIKE** A hopping arcade  
classic. **FREEZE** Electron wallpaper.  
**PELICAN** Cross roads safely.  
**CHESTERMIR** Clock your moves.  
**ASTERIOD** Space action. **SECRET**  
messages made simple. **FRUIT  
MACHINE** Spin the wheels to win  
chocolates. **AVOID** Avoid the opponent  
to survive. **TIC-TAC-TOE** Electron  
thoughts and crosses. **ELECTRON**  
**DRAGSTAMPS** Create and save  
Electron masterpieces.

## On the March 1984 tape:

**CHICKEN** Test your nerve.  
**COFFEE** A tantalising word game.  
**PARKY'S** Heril Park's movable  
map. **REACTION TIMER** How fast  
are you? **BRAINTEASER** A  
building program. **MENTAL**  
arithmetic. **PAPER, SCISSORS,  
STONE** Out-guess your Electron.  
**CHARACTER GENERATOR**  
Create shapes.

## On the February 1984 tape:

**NUMBER BALANCE** Mental  
arithmetic. **CALCULATOR** Test  
your Electron a calculator. **DOILIES**  
Patterns galore. **TOWERS OF  
HANOI** The age problem. **LEONAR**  
**LANDER** Test your skill.  
**POSITION INVADERS** The old  
school favorite.

## On the introductory tape:

**ANAGRAM** Sort out the jumbled  
letters. **DOODLE** Multicoloured  
graphics. **EUROSCOPE** World  
geography. **KALEIDOSCOPE**  
Electron graphics run riot.  
**CRITICALS** New graphics letters.  
**ROCKET, WHEEL, CANDI** Three  
fireworks programs. **BOMBER** Drop  
the bomb before you crash. **DUCK**  
Simple animation. **METEORS**  
Collisions in space.

**Now combined in  
two fun-filled  
packages... all  
the traditional  
card and board  
games you've  
been asking for  
- again and again!**

SCOOP!

REPTON 2

SAVE  
£6

**Repton on the  
Electron was  
a sensation.  
But wait till  
you've played  
Repton 2!**

Repton 2 has been given rave reviews.  
And no wonder!

It's massive scenario, with 16 different levels – and each one 16 times the size of your TV screen! You've more than 1,000 diamonds to find, apart from facing the hostile elements, fighting even more hostile monsters and solving a fiendish jigsaw puzzle. It's the biggest challenge ever!

*If you already have a subscription which does not expire for several months you can re-order early to benefit from this exceptional offer.*

**Here's a bargain offer  
for subscribers:**

Take out a year's subscription  
to *Electron User* and we'll  
send you **Repton 2** for only

**£3.95**

– that's a massive **£6 LESS**  
than you'd pay elsewhere!

*(Not available without subscription)*

ONLY  
£3.95

**Your Electron  
needs  
protecting!**

Protect your Electron with our luxury dust cover made of soft pliable water-resistant vinyl, bound with strong cotton and decorated with the Electron User logo.

**Keep your  
copies neat  
and clean!**

This handsome binder is bound in attractive red pvc with the Electron User logo in gold blocking on the spine. It will hold 12 magazines firmly secured in place by metal rods.

ONLY  
£3.95

## ELECTRON

### EPROM PLUS

SIDWAYS ROM UNIT FOR THE ELECTRON !!

Using this Superb ADD-ON for the Acorn Electron with PLUS 1 expansion you can fit up to 4 ROMS/EPROMS (8 with 2 units fitted) which will then be available at the flick of a switch.

The EPROM PLUS plugs into either of the expansion sockets of the PLUS 1, and will accept 8K or 16K ROMS/EPROMS. The facility to POWER UP into whichever ROM is selected, on BASIC II required, is a useful feature of the unit.

An added bonus is that many of the ROMS available for the Beeb will also run on the Electron, offering another world of software.

ORDERING: One EPROM PLUS Unit £14.95  
Two EPROM PLUS Units £27.95  
Please add £1.00 P&P

SPECIAL INTRODUCTION OFFER (1985 only)

Two EPROM PLUS Units ONLY £24.45 + P&P

**16k EPROM**  
**Advanced Disc Toolkit**  
containing over 30 commands

It's invaluable value for money - 16k EPROM only

Now transfers "locked" programmes from cassette

INVALUABLE TO EVEN NON-DISC USERS

Advanced Disc Toolkit is a 16k utility ROM designed for both BBC and Acorn Electron computers, and 65C02, Z80 second processors, single and double density disc filing systems, including Acorns new advanced disc filing system, ADFS, Acorn Winchester drive, Econet and sideways RAM. ADT contains over 30 useful utilities to enhance your computer system.

### DISC Commands:

One sector editor - in 40-BE expert mode  
One search for strings/bytes. Recover  
vectors from any part of a  
disc. Format/verify any number of  
discs on command. Copy  
discs. Backup discs using the  
advanced memory. Backup the  
system map. Use standard Electron  
ADFS file system. Backup verify  
back-up/restore file type. Dual  
language.

### MEMORY commands:

Examine MEMORY/VIDEO memory in any  
range - 10 Second Processor memory. Name  
Range. or 65C02 to 65C01. Also  
remember they are in variable file size in a  
compressed version.

Search 10 Second Processor memory  
Range for strings or bytes. Search  
for variable names or BASIC  
variables. Move memory between  
10 Second Processor/Rom  
Range.

### OTHER PRODUCTS

NEW SUPPLIES OF 27128 EPROMS (4.25 OR  
ONLY £3.75 FOR QTY 4+ inc. p&p) - VAT

### ELECTRON PRODUCTS

#### Advanced Sideways Ram

A unique facility for the ELK Software: EPROMS can be loaded in and automatically  
write protected. No links to pull or connect. Can be switched between 2 x 8k or 1 x  
16k. FREE software support to include print buffer  
Due to increased production and lower component costs we  
are now able to offer ASR to an incredible £25

#### Advanced Rom Adaptor 1

Now you can gain access to many existing EPROMS by simply inserting them into  
this budget adaptor cartridge that plugs into the Plus 1

#### Advanced Rom Adaptor 11

As the AR1 but with 2 sockets. It is now possible to have 4 EPROMS on line  
without attaching bulky interfaces. A key feature of this product is the built in facility to  
upgrade to 8k or 16k RAM

#### Advanced Electron DFS

This EPROM allows ELK and Plus 3 users to use both ACORN DFS 5, ADFS & 1770  
DFS (as supplied in the BBC B) Now you can load chain ext. compatible BBC disc-  
based software

# Citadel

**ACORN  
ELECTRON  
BBC  
MICRO**

A huge adventure featuring over 100 beautifully detailed screens packed with challenging puzzles and awesome foes. You start in the vast 3-towered citadel with its curious cellar and well. Should you survive the perils within, you can venture on to the witch's house, Stonehenge, the pyramids, and across the desert to the mountains. Cross the ocean and you will reach the mystic temple on the island. You should devise how to use the ice crystal, trampolines, cannonballs, Egyptian statues, etc., to the best advantage in your onerous mission. Cleverly realistic animation (flickering torches, splashing water, and smouldering furnaces), is used throughout to depict your movements and to vividly portray the fearsome monks, mummies and wolves.

## COMPETITION — 2 CHANCES TO WIN!

Three crowns have been craftily hidden within the adventure; the first person to locate any two of the three crowns will win **£100**. The maximum score which can be obtained is 99 points; the first person to reach this score will be presented with an impressive personal engraved shield and a cheque for **£200**.

**KEYBOARD OR JOYSTICKS    CASSETTE VERSION \$9.95    BBC DISC VERSION \$11.95**

**WE PAY UP TO 20% ROYALTIES FOR HIGH QUALITY PROGRAMS**
